Introduction

Ir Dr. Sam C. M. Hui

Department of Mechanical Engineering

The University of Hong Kong

E-mail: cmhui@hku.hk

Jun 2021

About the Lecturer

- ***Ir Dr. Sam C. M. Hui*** 許俊民 博士 工程師

- PhD, BEng(Hons), CEng, CEM, BEAP, BEMP, HBDP, MASHRAE, MCIBSE, MHKIE, MIESNA, LifeMAEE, AssocAIA
 - CEng = Chartered Engineer
 - CEM = Certified Energy Manager
 - BEAP = Building Energy Assessment Professional
 - BEMP = Building Energy Modeling Professional
 - HBDP = High-performance Building Design Professional
 - LifeMAEE = Life Member, Association of Energy Engineers
 - AssocAIA = Associate Member, American Institute of Architects
- ASHRAE Distinguished Lecturer (2009-2011)
- President, ASHRAE Hong Kong Chapter (2006-2007)

Contents

- Course background
- Green/sustainable building
- Green building trends
- Sustainability
- Hong Kong situation

Course background

- MEBS6020 Sustainable Building Design
 - Educational Objectives
 - To introduce the key concepts and important issues of sustainable buildings
 - To develop practical skills for planning and designing sustainable building projects
 - Assessment:
 - Examination (60%)
 - Continuous Assessment (40%)
 - Two assignments

Course background

- MEBS6020 Sustainable Building Design
 - Learning Outcomes:
 - Describe and apply the key concepts and design strategies to develop sustainable buildings
 - Understand the important issues and major considerations for planning and assessing sustainable buildings
 - Develop practical knowledge and information to study and implement sustainable building projects

Course background

- Study topics of MEBS6020:
 - 1. Introduction
 - 2. Sustainable Building Concepts (Part 1 & 2)
 - 3. Sustainable Masterplanning (Part 1 & 2)
 - 4. Energy and Environmental Design (Part 1 & 2)
 - 5. Green Building Assessment (Part 1 & 2)
 - 6. Analysis Methods and Tools (Part 1 & 2)
 - 7. Practical Examples

**“What is
green
building?”**

An example of green building in Hong Kong ?!

(A building in Pokfulam; photo taken by Dr Sam C M Hui)

Green building is NOT just adding a green outlook

Cologne

Building
+
Green

Toronto

Green/sustainable building

- A loosely defined collection of land-use, building design, and construction strategies that reduces the **environmental impacts**
- The term “green” is extremely wide ranging, encompassing many viewpoints and open to broad interpretation
 - Debate around green building/architecture
 - Complexity of environmental issues

Green/sustainable building

- It involves a *holistic* approach to the design and operation of buildings. It considers:
 - *1) Economy and efficiency of resources*
 - *2) Life cycle design*
 - *3) Human well-being*
- Main objectives
 - Be environmentally friendly and responsible
 - Improve the quality of built environment

Going Green. What is Green Building?

Going Green

What is Green Building?

The ideal green building would be a building project that allows you to preserve most of the natural environment around the project site

- The construction and operation promotes a healthy environment for all involved
- The Project will not disrupt the land, water, resources and energy in and around the building

By adopting greener practices, we can take maximum advantage of environment

Green buildings helps in reducing overall impact on environment and human health by

- Reducing trash, pollution
- Efficiently using energy and other resources
- Protecting occupant health and improving productivity.

Green/sustainable building

- **What is Green Building?** [World Green Building Council] <https://www.worldgbc.org/what-green-building>
 - It is a building that, in its design, construction or operation, reduces or eliminates negative impacts, and can create positive impacts, on our climate and natural environment
 - Green buildings preserve precious natural resources and improve our quality of life
 - Any building can be a green building, whether it's a home, an office, a school, a hospital, a community centre

WORLD
GREEN
BUILDING
COUNCIL

Green/sustainable building

- **Green Building defined**

- [HKGBC = Hong Kong Green Building Council]
<https://www.hkgbc.org.hk/eng/about-us/what-is-green-building/>
- A practice of reducing the environmental impact of buildings and enhancing the health and wellbeing of building occupants
- Provides a quality living amenity for its users and neighbours in terms of social, environmental and economic aspects while minimising negative environmental impact at the local, regional and global levels throughout its full life cycle

Green/sustainable building

- **Definition of Sustainable Building** [by an OECD project]
 - Have minimum adverse impacts on the built and natural environment, in terms of the buildings themselves, their immediate surroundings and the broader regional and global setting
 - Apply practices which strive for integral quality (economic, social and environmental performance) in a very broad way

Green/sustainable building

- Green buildings are
 - Energy and resource efficient
 - Non-wasteful and non-polluting
 - Sustainable design that helps minimise broad environmental impacts (e.g. ozone depletion)
 - Highly flexible and adaptable for long-term functionality
 - Easy to operate and maintain (lower running costs)
 - Supportive of the productivity and well-being of the occupants

What factors determine whether a building is sustainable?

Eco sustainable building practices

Features which can make a building 'green'

- Efficient use of energy, water & other resources
- Use of renewable energy, e.g. solar energy
- Pollution & waste reduction measures, and the enabling of re-use and recycling
- Good indoor environmental air quality
- Use of materials that are non-toxic, ethical & sustainable
- Consideration of the environment in design, construction & operation
- Consideration of the quality of life of occupants in design, construction & operation
- A design that enables adaptation to a changing environment

Green/sustainable building

- Benefits of green buildings:
 - **Environmental**
 - Use less energy, water & natural resources
 - Reduce greenhouse gas (GHG) emissions
 - Increase biodiversity & address climate change
 - **Economic**
 - Utility cost savings (energy & water)
 - Lower construction costs & higher property value
 - **Social**
 - Provide better places for people to support healthier, happier & more productive lives

How can we make our buildings green?

1. Taking an intelligent approach to energy

- Minimise energy use & integrate renewable/low-carbon technologies

2. Safeguarding water resources

- Improve water efficiency & management

3. Minimising waste & maximising reuse

- Use durable materials & generate less waste; promote reuse & recycling

4. Promoting health & wellbeing

- Ensure good quality for indoor air, natural light & acoustics

5. Keeping our environment green

- Preserve nature & diverse wildlife; create green spaces

6. Creating resilient & flexible structures

- Adapt to changing climate & design flexible spaces

7. Connecting communities & people

- Connect & enhance communities; improve transport & communication

8. Considering all stages of a building's life-cycle

- Reduce environmental impacts and maximise social & economic value

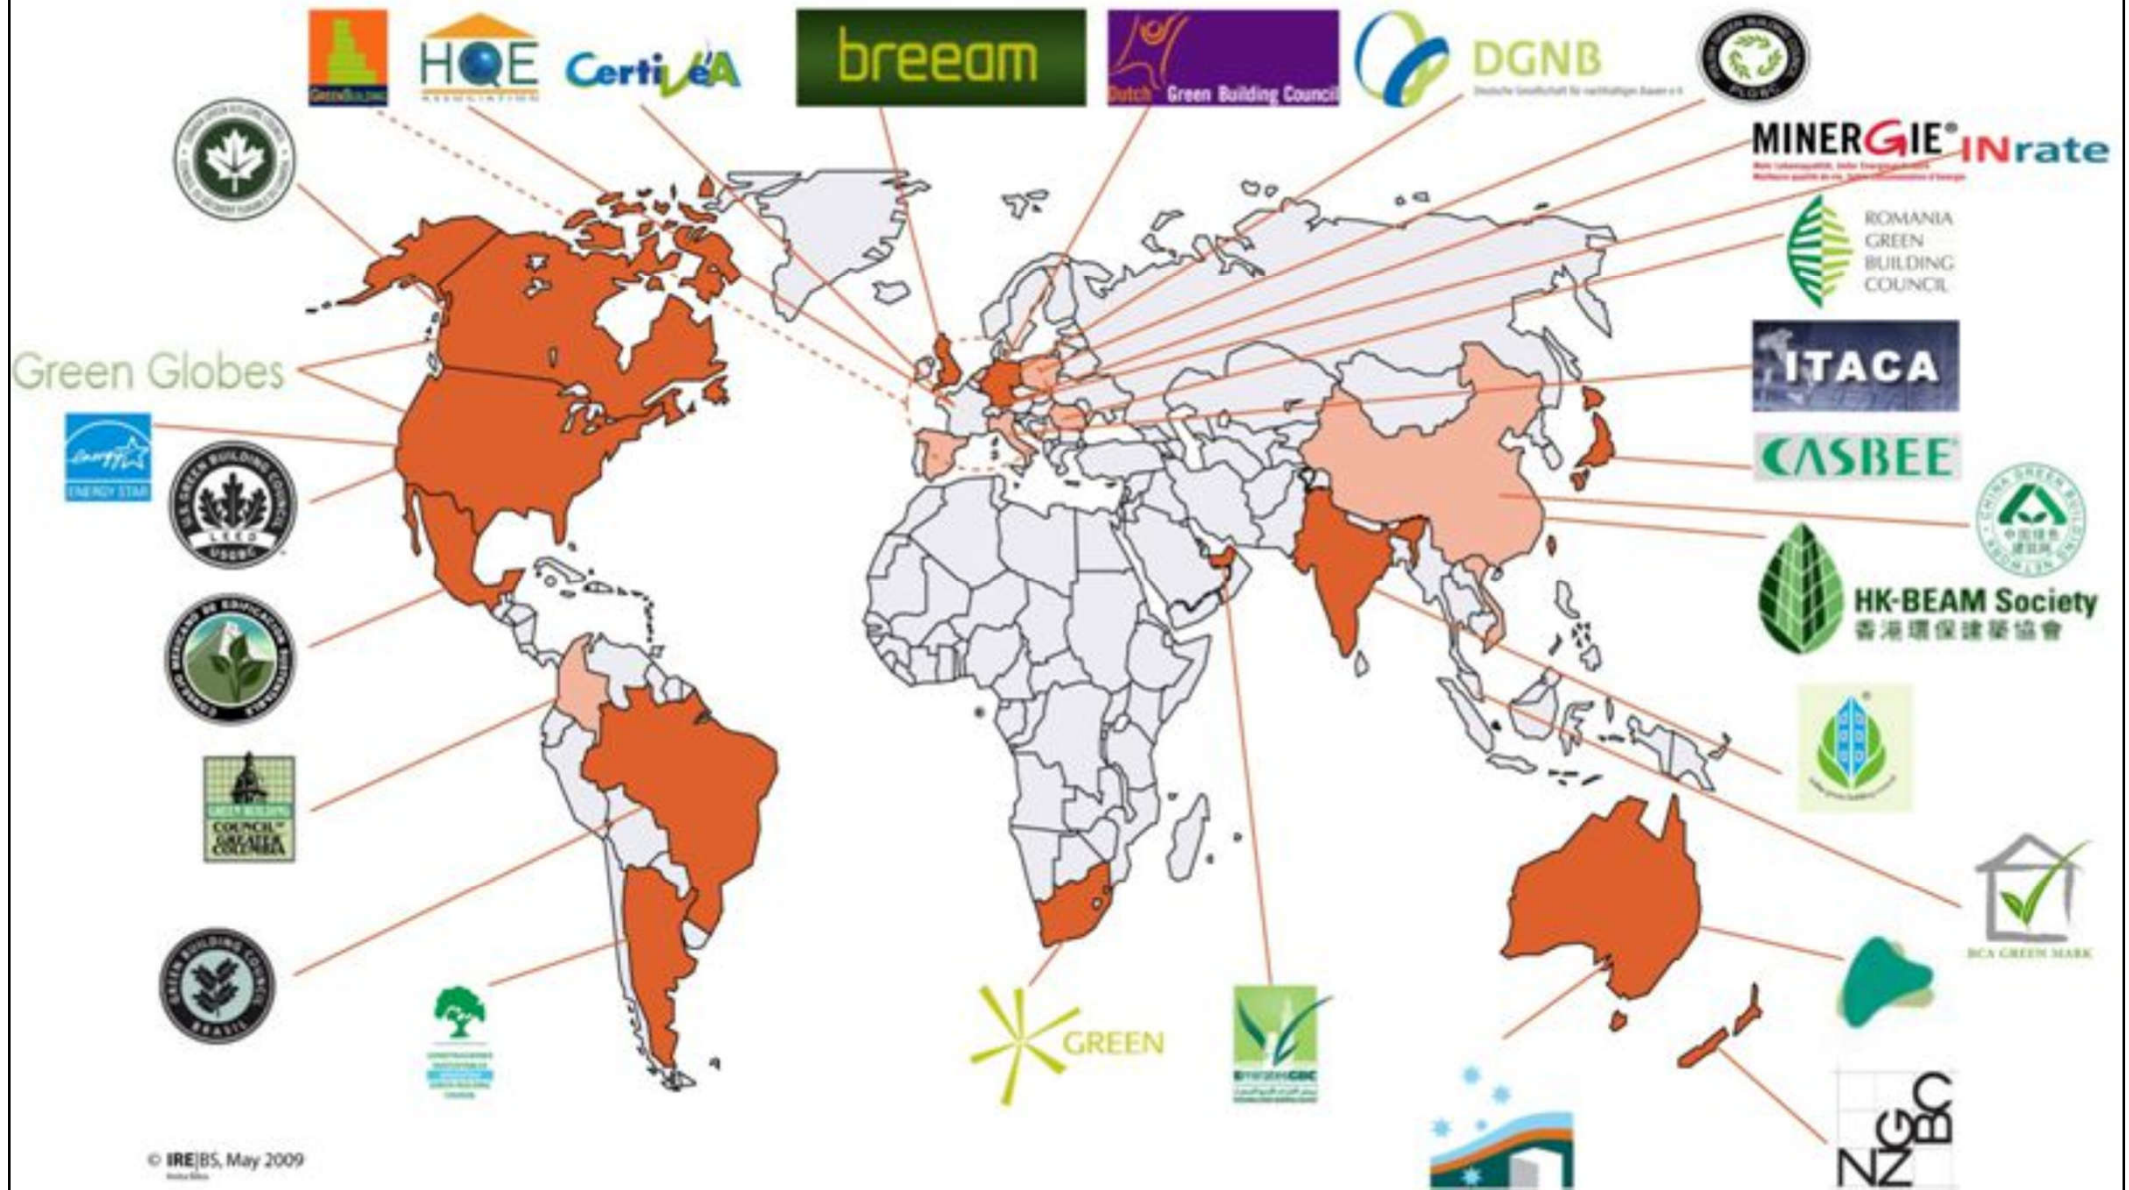

Green building trends

- Worldwide green building movement
 - Establishment of green building councils
 - Green building rating and certification
 - Advancing Net Zero and decarbonisation
- Driving factors:
 - Client demands
 - Environmental regulations
 - Healthier buildings
 - Sustainability

Green building rating and certification in the world

Green Building Evolution (3:47)

<https://youtu.be/MroerBD69bA>

WORLD
GREEN
BUILDING
COUNCIL

www.worldgbc.org

The story of the evolution of the green building movement told through image and dance. At the opening of the WorldGBC Congress/GBCSA Convention in Cape Town in 2013.

Green building trends

- Green building rating tools & certification
 - To assess & recognise buildings which meet certain green requirements or standards
 - Examples: BEAM Plus, BREEAM, CASBEE & LEED
 - Often voluntary, to encourage good practices
 - Can be applied to the planning & design, construction, operation & maintenance, renovation, and eventual demolition phases
 - For different building types (e.g. homes, commercial buildings or even whole neighbourhoods)

© 2015 Jerry Yudelson

World green building trends 2018

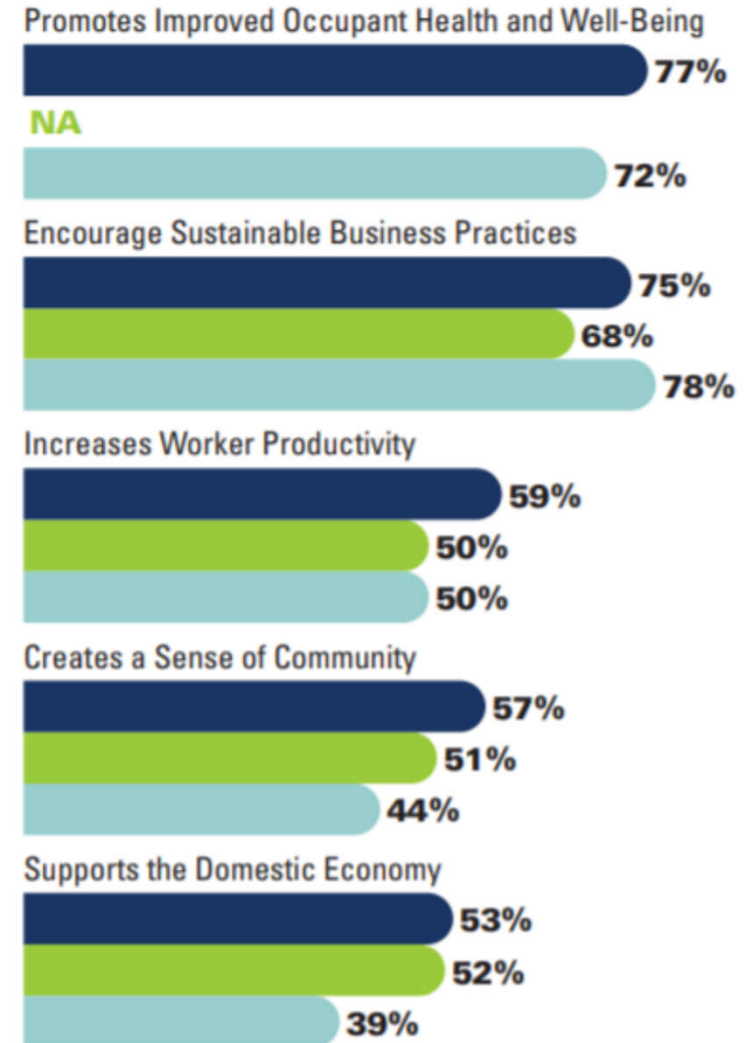

Level of Green Building Activity (According to Global Respondents)

Dodge Data & Analytics, 2018

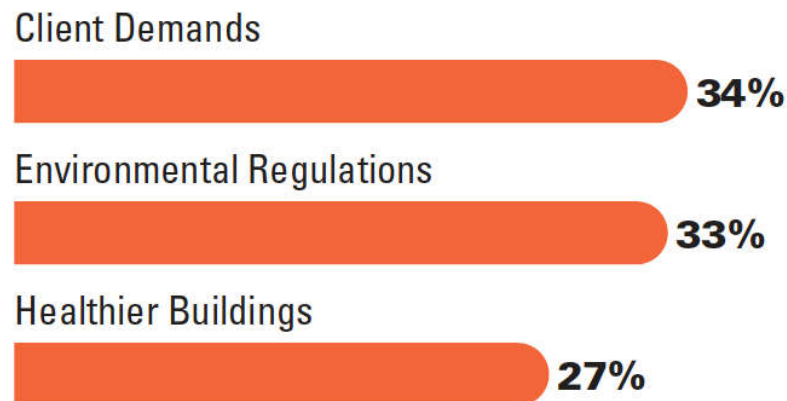

Top Social Reasons for Building Green (By Percentage of Global Respondents Rating Each Reason as Important)

Dodge Data & Analytics, 2018

Top Triggers Driving Future Green Building Activity (According to All Global Respondents)

Dodge Data & Analytics, 2018

Green building trends

- Top 5 most important trends:
 - Life cycle thinking and management
 - Health and wellbeing
 - Increased focus on carbon neutrality
 - Resilience (multi-functioning & adaptability)
 - Digitalisation
- Driven by regulatory issues, financial benefits, environmental awareness & responsibility

Green building trends

- An example of green building rating tool: LEED by U.S. Green Building Council
 - Video: What is green building? (1:16) <https://youtu.be/MyIOtsx3wDs>
- Green, sustainable and healthy buildings
 - How are they different in concepts?
 - Video: Green sustainable and healthy buildings explained (2:25) https://youtu.be/dDATY3av_48

Green building trends

- Healthy building 健康建築
 - It refers to an emerging area of interest that supports the physical, psychological, and social health and well-being of people in buildings and the built environment
 - Components:
 - Site selection
 - Building design
 - Indoor environmental quality (IEQ), e.g. daylighting
 - Diet and exercise

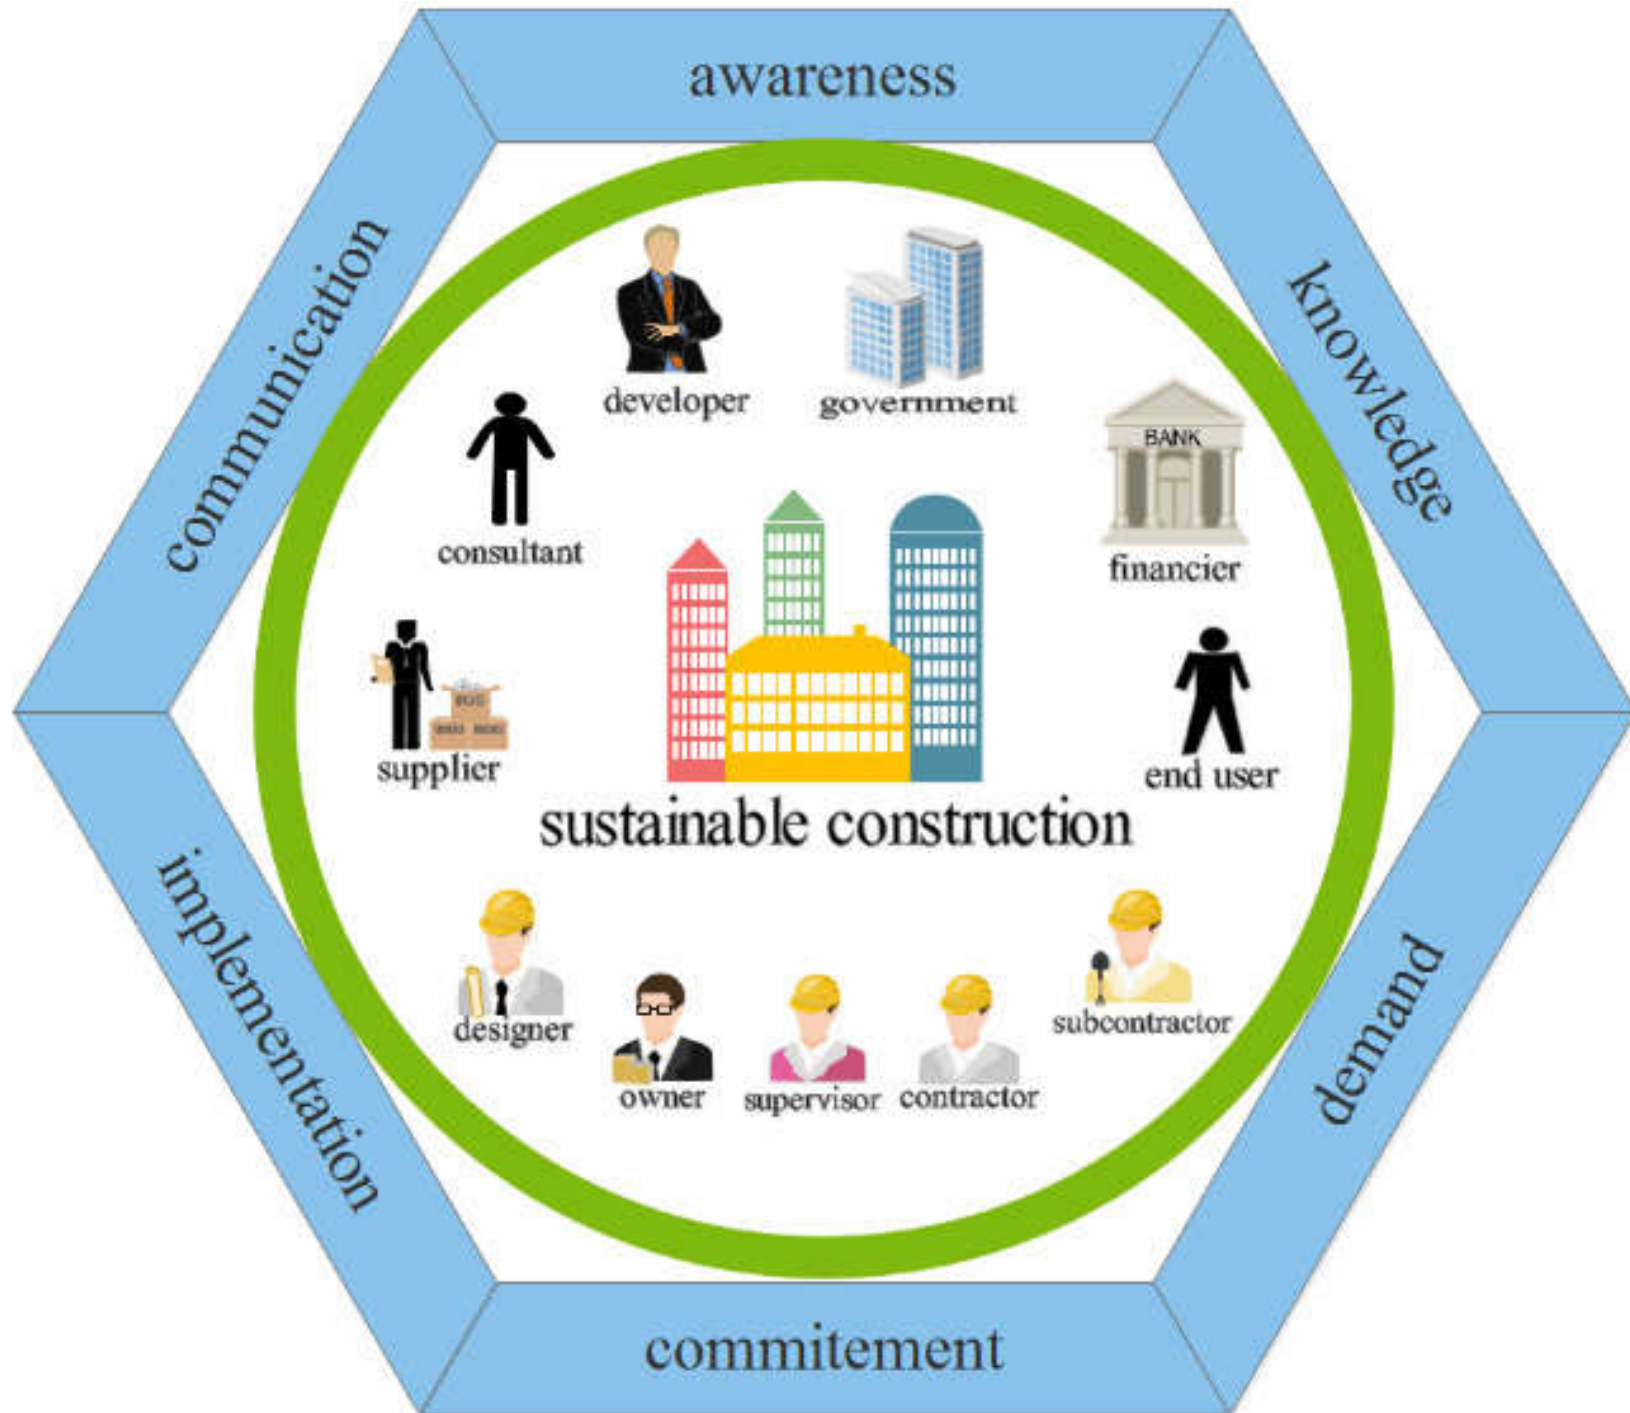

The 9 Foundations of a Healthy Building

Elements of healthy buildings and green buildings

 Natural Elements	 Health & Wellness	 Materials & Resources	 Community	 Energy		
 1 Collect Rainwater	 9 50 PA Tight Building Envelope	 16 One Planet Living 1/5	 38 Low Water Landscape	 2 Highly Insulated	 22 Battery Back-up	
 3 Rain-screen Technology	 15 Indoor Air Quality	 17 Healthy & Happy Homes	 45 Green Building Certifications	 39 Kitchen Sink Faces Central Courtyard	 5 Daylight	 23 Electric Car Charging
 4 Extreme Climate	 25 Passive Cooling	 18 FSC Eco-friendly Lumber	 46 Faster Construction	 40 Community Garden	 6 Wind Energy	 31 Insulated Floors
 8 Greywater System	 35 No Off Gassing	 26 Reduce, Reuse & Recycle Materials	 47 Durability	 41 Urban Infill	 7 Solar Hot Water	 32 Energy Star
 14 Water Savings	 27 Renewable Resources	 10 Kid and Pet Friendly	 48 Local Labor	 11 Direct Current Electricity	 33 Heat Recovery Ventilation	
 24 100 mph Wind & Seismic	 28 Compost	 19 Porches Face Each Other	 49 Financially Accessible	 12 LED Lighting	 42 \$ 0.00 / yr Net Zero Energy	
 34 100 psf Snow Load	 36 Living Wall & Roof	 20 People Inside, Cars Outside	 50 Sound Attenuation	 13 Solar Powered Electricity	 43 Passive Solar	
 44 Fire & Earthquake Protection	 37 Roof Garden	 29 Homes Around Central Courtyard	 21 Home Automation			

Stakeholders and factors surrounding sustainable construction

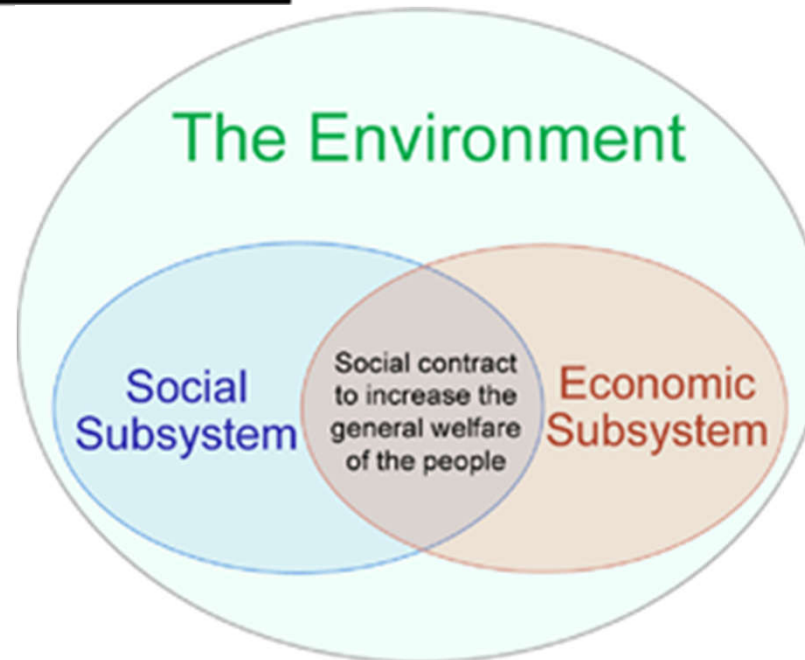

Sustainability

- Sustainability focuses on meeting the needs of the present without compromising the ability of future generations to meet their needs
 - Three pillars of sustainability: economic, environmental, and social (also known informally as profits, planet, and people)
 - Five domains: environmental, social-cultural, technological, economic, public policy

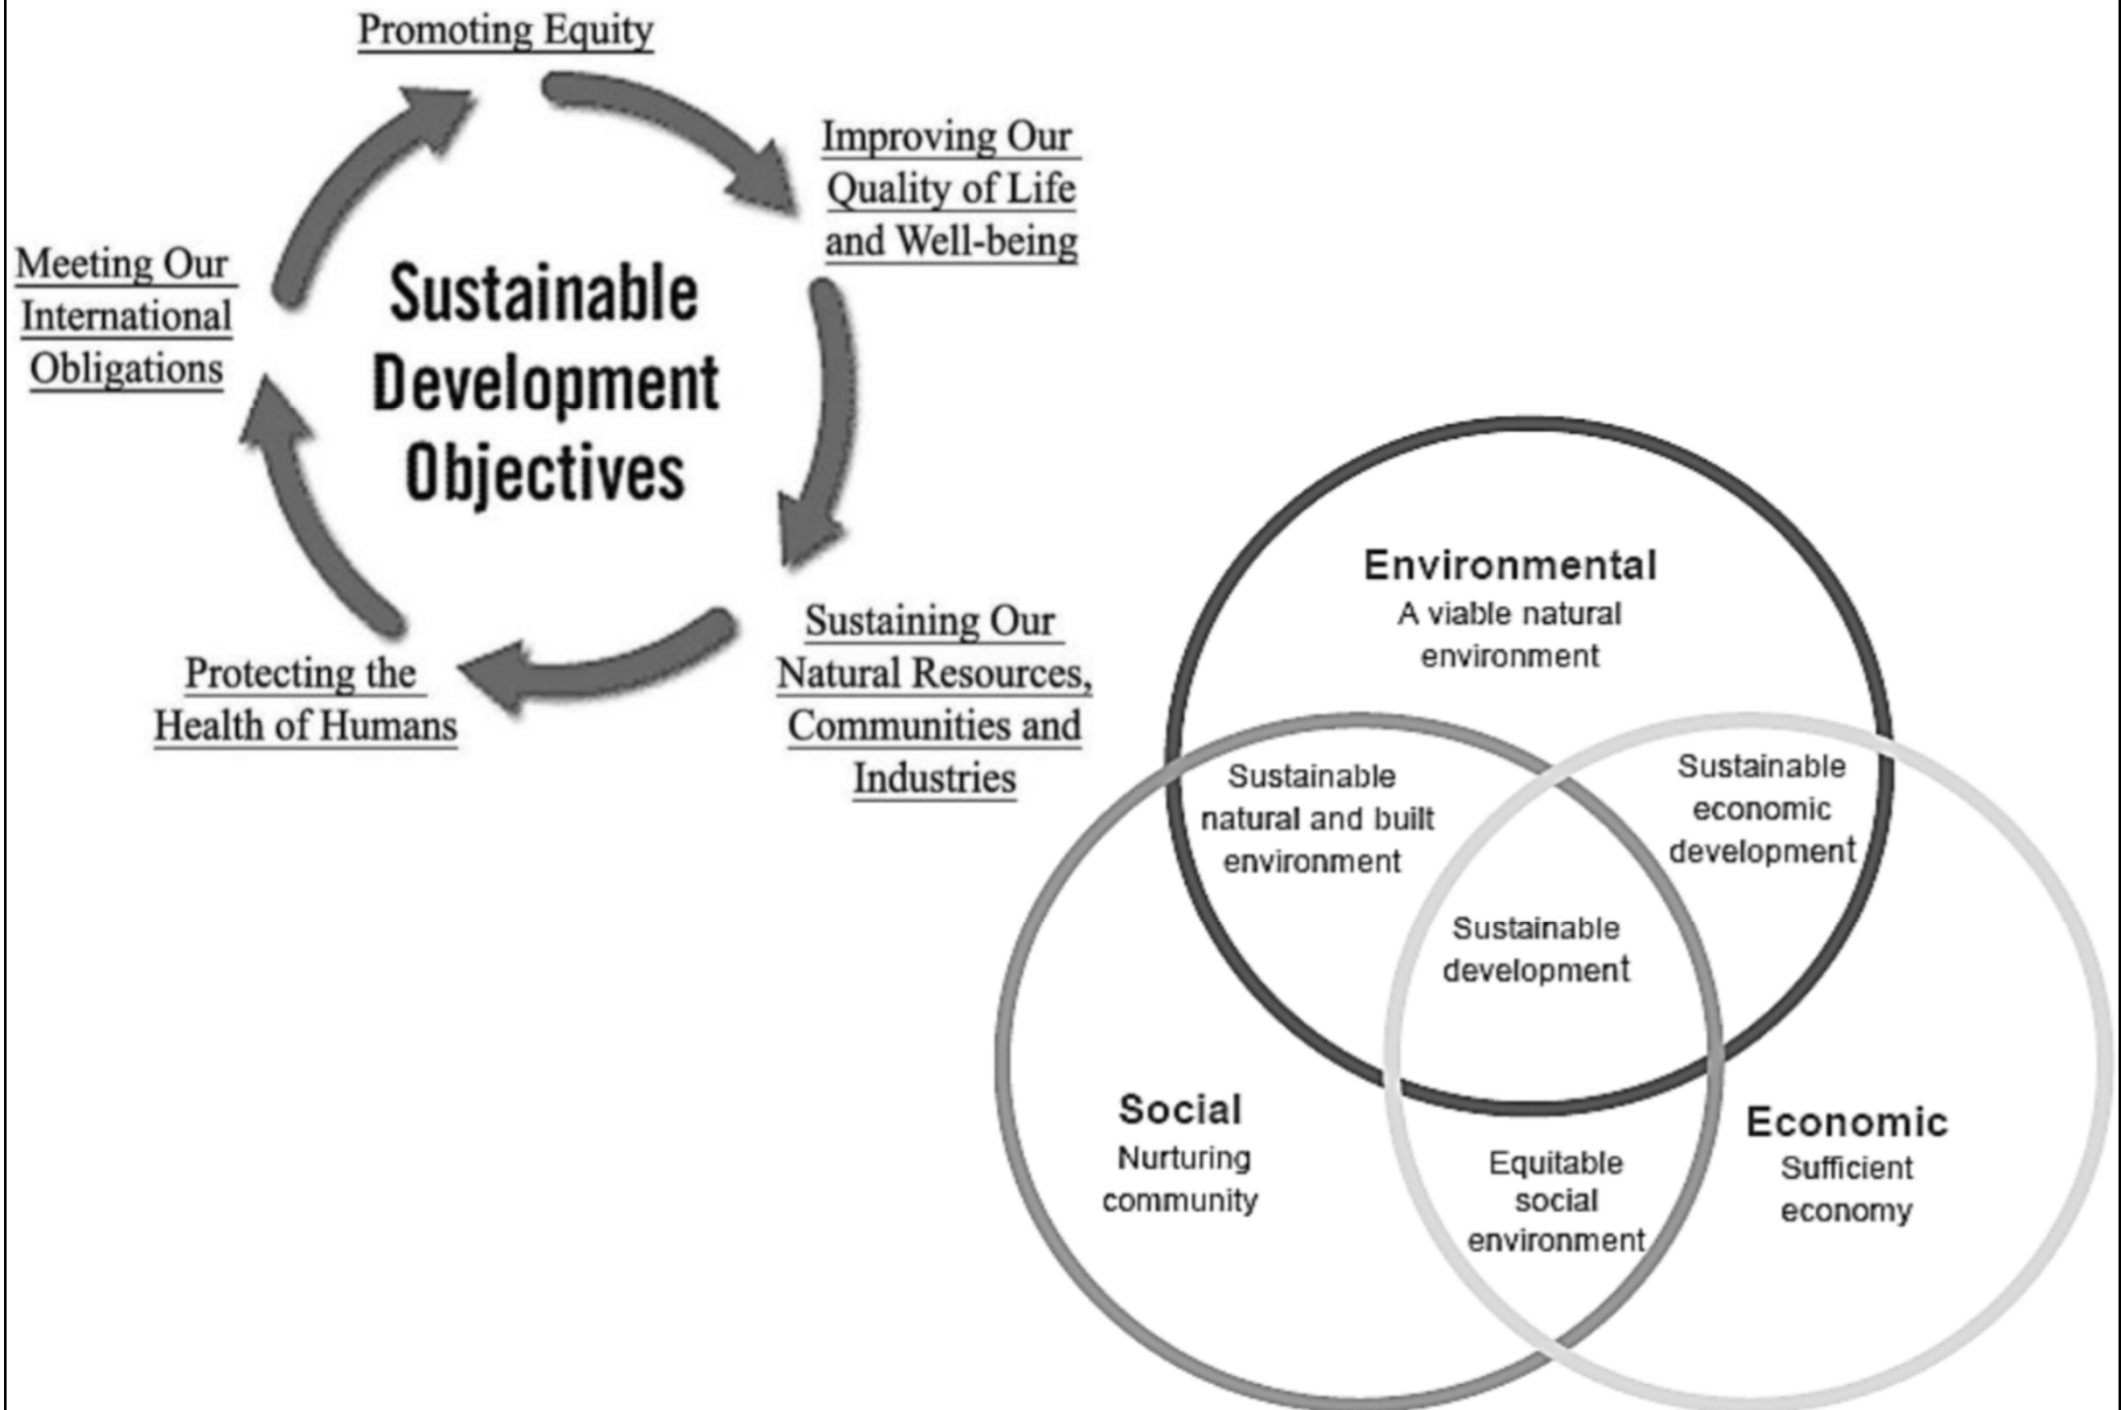

Three pillars of sustainability

Five domains of sustainability

Sustainable development objectives

Sustainability

- Green building can help to achieve the UN Sustainable Development Goals (SDGs)
 - <https://www.worldgbc.org/news-media/green-building-improving-lives-billions-helping-achieve-un-sustainable-development-goals>
 - A challenge for humanity to decouple economic growth from climate change, poverty & inequality
 - Not only save energy, water & carbon emissions but to educate, create jobs, strengthen communities, improve health & wellbeing

SUSTAINABLE DEVELOPMENT GOALS

Sustainability

- Green building affects 9 nos. SDGs:
 - 3. Good health and well-being
 - 7. Affordable and clean energy
 - 8. Decent work and economic growth
 - 9. Industry, innovation and infrastructure
 - 11. Sustainable cities and communities
 - 12. Responsible consumption and production
 - 13. Climate action
 - 15. Life on land
 - 17. Partnerships for the goals

GOALS

How green offices help to achieve sustainable development goals

How **green offices** can provide the foundations towards meeting several **Sustainable Development Goals**

WORLD
GREEN
BUILDING
COUNCIL

SUSTAINABLE
DEVELOPMENT
GOALS

Sustainability

- Corporate Social Responsibility (CSR) 企業社會責任
 - Refers to a company's commitment to practice environmental and social sustainability and to be good stewards of the environment and the social landscapes in which they operate
 - Business ethics + Green business + Eco-certification
- Sustainability and CSR reporting
 - CSR initiatives for green buildings
 - Make public their environmental performance in accordance with the Global Reporting Initiative
 - Example: <https://www.hanison.com/eng/CSR/Reports.aspx>

Sustainability

- Companies that include green buildings in their CSR strategy will have a higher stock market performance because:
 - Green buildings are more efficient in their operation and reduce costs which improves the cost structure of companies
 - Green building investments signal a commitment to CSR which in turn positively affect consumer, employee and other stakeholder attitudes towards the company

Asset Management Results 4 -CSR Activities-

- Contributing to neighboring communities through CSR activities and application of environmentally friendly measures

Yoyogi Place : Enhancing energy saving measures (May 2013)

Low-Carbon Small and Medium-Sized Model Buildings

- On May 2013, Tokyo Metropolitan Government publicized buildings that shall be ranked more than A1 based on the benchmark for low-carbon building (CO2 emissions within a year/gross floor area) as "Low-Carbon Small and Medium-Sized Model Buildings" which actively worked for energy saving
- Improved environmental performance of building through energy efficient facilities
- Co-worked for energy saving with each tenant while maintaining tenant service level

Benchmark for low-carbon building
A2

TLC Ebisu Building : Joined energy-saving program (2008~)

"Reduction of CO2" Program for Small and Medium-Sized Office Buildings

- Joined "Reduction of CO2" Program for Small and Medium-Sized Office Buildings hosted by Tokyo Metropolitan Government since 2008
- Changed to better electrical equipment such as installing a heat source system
- Changed the lighting to more energy saving types in exclusive area

Continuous power-saving effect

CSR activities : Awarded DBJ Green Building Silver (March 2013)

- High-reflectance paint on the rooftop
- Automatic dimming in exclusive area
- Moist pavement (water sprinkling)
- Roof gardening
- LED lighting in common space
- Wallgreening

(A-PLACE Ikabukuro)

- Automatic switching of kitchenette lights
- Automatic dimming in exclusive area
- West outer wall louver
- LED lights

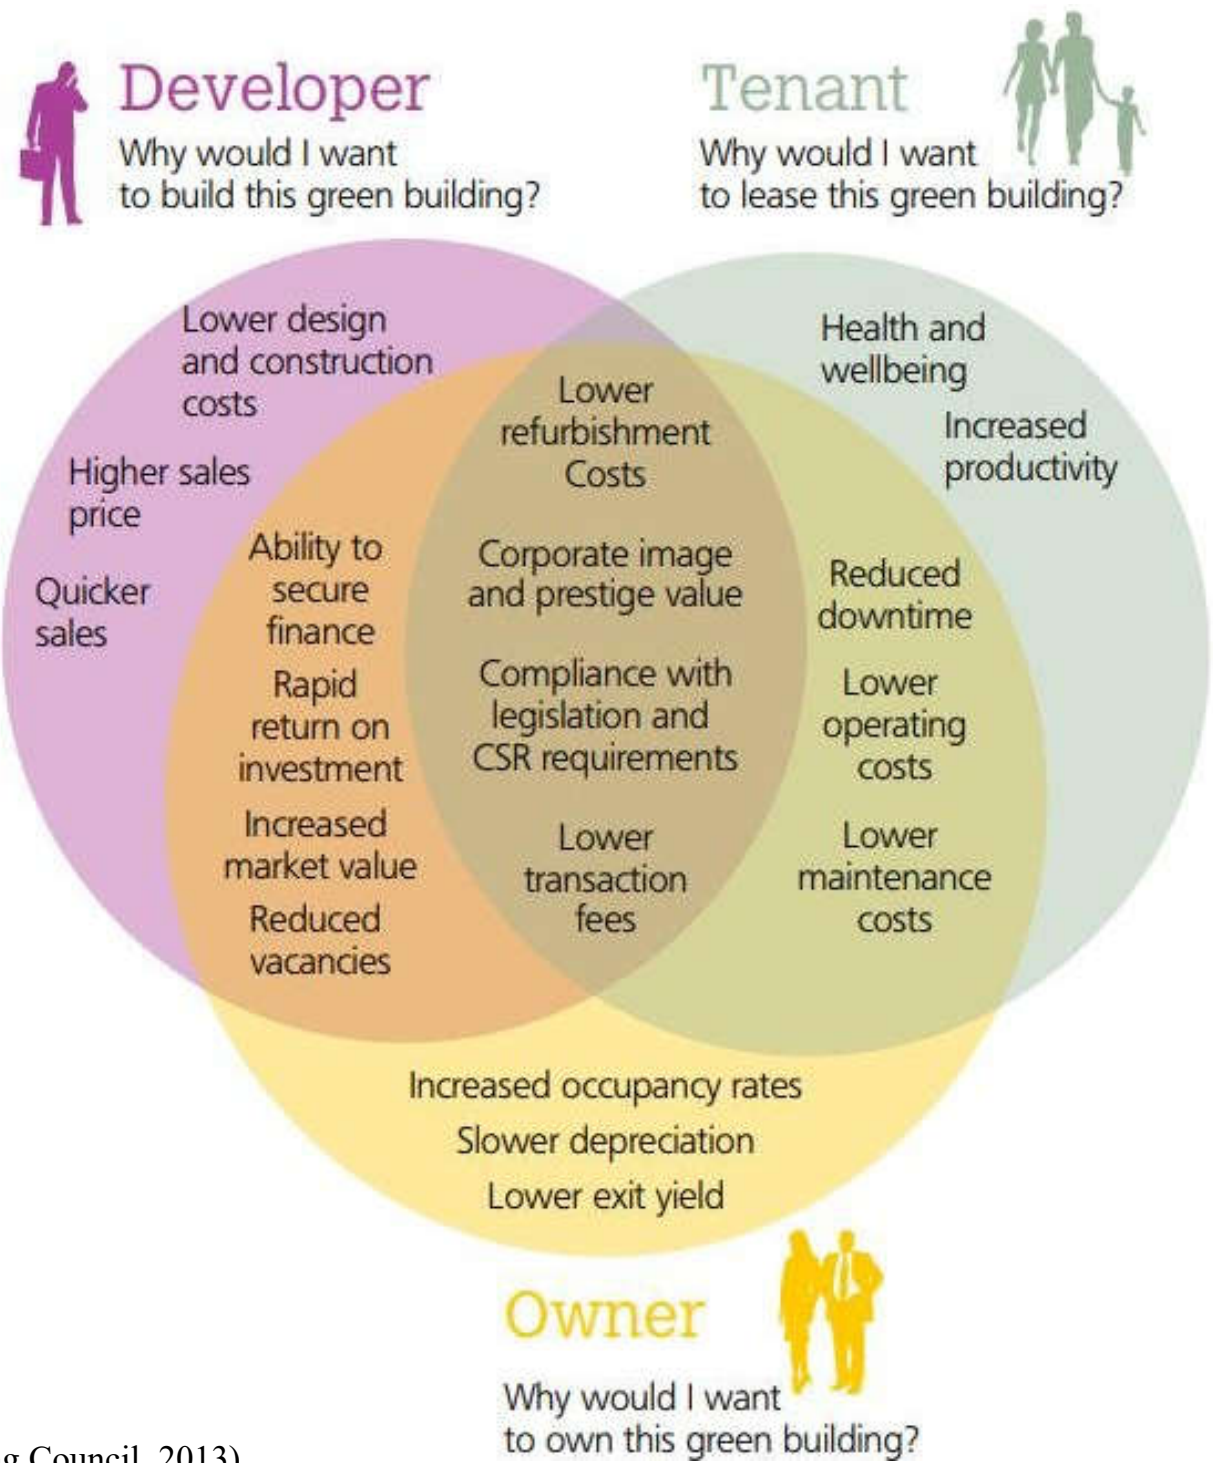

(Kanayama Center Place)

Certified

The benefits of green building in key stakeholders' perspective

(Source: World Green Building Council, 2013)

Hong Kong situation

- Subtropical climate
- Population > 7.4 million, land area 1,106 km²
- Hilly and mountainous terrain
- High-rise, high density urban areas
- Building-related activities account for 90% of Hong Kong's total electricity consumption and 60% of the city's greenhouse gas emissions

Hong Kong Context

42,000+

42,000+ buildings
in private sector

8,000

8,000 high-rise buildings
and skyscrapers

Our activities in buildings account for
90% of electricity consumption or
60% of carbon emission in Hong Kong

People live and work in
24% of Hong Kong's
total area

Average population
density of built-up areas
reaches **27,330**
persons/km²

Hong Kong situation

- Hong Kong's first green building benchmark was launched in 1996 (i.e. HK-BEAM)
