

Job Details

BIM Manager (ref: E18004)

You will develop and implement BIM strategy, roadmap and corporate standards. You will lead a team of BIM professionals to assist engineers and architects to adopt BIM technology for all new extension projects throughout the project lifecycle, including design, construction and operating phases. You will provide guidance, training and workshops to internal and external stakeholders to ensure compliance with corporate requirements and specifications of using BIM technology. You will also develop and implement the Common Data Environment based on relevant British Standard and oversee the tasks conducted by appointed consultants.

You should have a Degree in a related engineering discipline with at least 10 years' relevant experience. Experience in managing the transformation from traditional 2D drawings to BIM drawings is an advantage. Possession of Corporate Membership of a professional institution is preferred.

Appointment will be made on two-year renewable contract terms.
