# SBS5411 Building Information Modelling for BSE <a href="http://ibse.hk/SBS5411/">http://ibse.hk/SBS5411/</a>

## **Revit Mechanical**

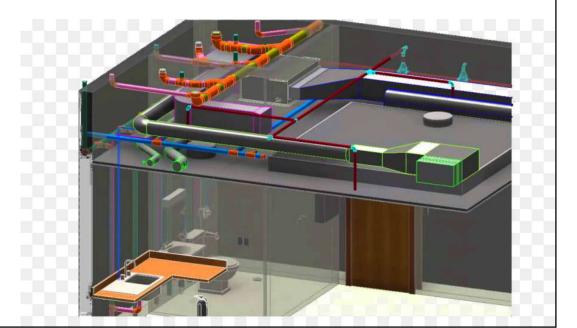

### Ir. Dr. Sam C. M. Hui Faculty of Science and Technology E-mail: cmhui@vtc.edu.hk

Sep 2018

# Contents

- HVAC cooling & heating load analysis
- Creating logical systems
- Mechanical systems & ductwork
- Mechanical piping

## • Revit MEP options:

- Model the HVAC loads within the program itself
- To export the space load data via a Green Building XML schema (gbXML) file to an external simulation software program, such as Trane TRACE 700, DOE-2, or Carrier's Hourly Analysis Program (HAP)
- Typical analysis tasks:
  - Cooling & heating load analysis, conceptual energy analysis, duct & pipe system pressure

## • Creating spaces

- Within room-bounding elements such as walls, floors, ceilings, roofs, and room separation lines
- Enable the selected architectural links to be room bounding
- Spaces carry the engineering data that is necessary for analysis, whereas rooms are for the information required by the architects
- Define the MEP spaces accurately; correctly model & account for space usage, internal loads

## Placing spaces

- Do it manually or letting Revit locate and place spaces automatically
- Check that areas e.g. utility chases, columns, or air spaces in wall constructions were not included
- Space properties schedule
  - Working schedule of the building space properties
  - Generic space naming & numbering convention
  - Internal loads: people, lighting load, power load

#### Real world scenario

David has an issue. He has received the preliminary building model from the architect, but has not been able to set up each space to get an accurate building load takeoff prior to the next project design meeting. Knowing that Revit MEP automatically defaults to a global building type, he adjusts the building type to office, adjusts the required parameter values, and tells the program to lay out the spaces automatically.

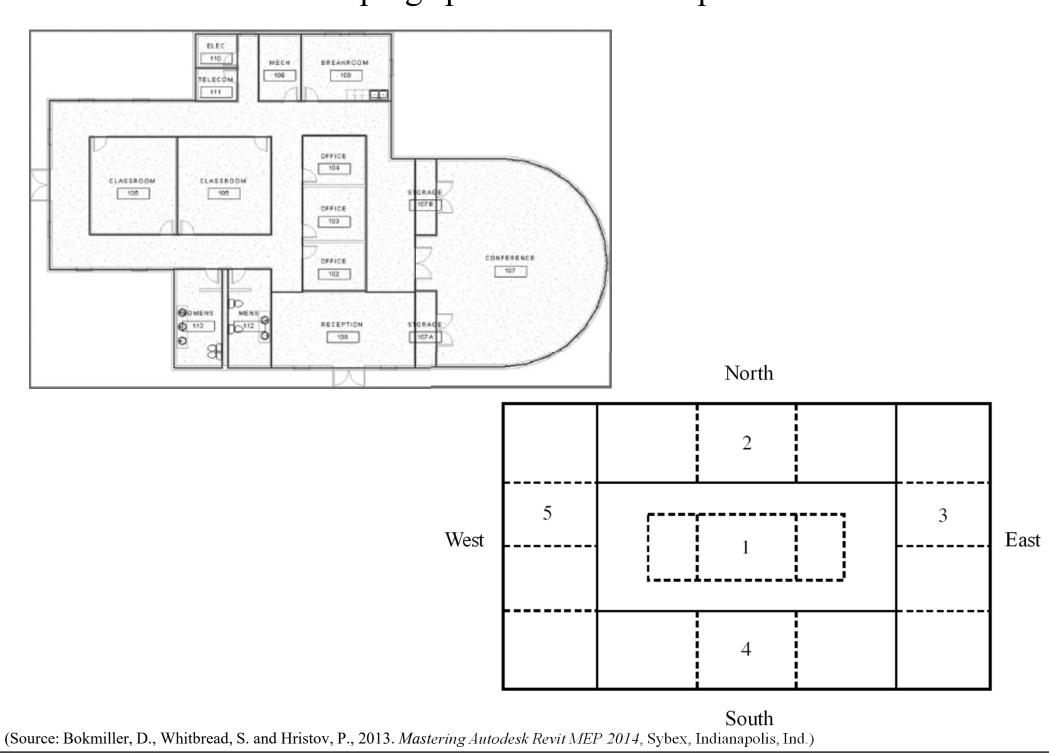

David is able to quickly generate initial heating, cooling, and ventilation loads and, with that data, the mechanical design team will be able to analyze different system possibilities to condition the building and present options to the project team.

## • Creating zones

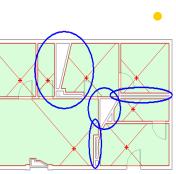

- Group similar spaces into zones
  - To provide common controllability of air quality or condition within the zone's spaces
  - Outdoor air & ventilation load are computed
- Building construction & physical properties
  - Exterior and interior constructions
  - Properties e.g. U-values, material composition
  - How heat leaves or enters your design spaces to or from the surrounding outdoor environment or adjacent spaces

## • Perform cooling & heating load analysis

- ASHRAE Radiant Time Series (RTS) method
- View building energy analysis information, weather data & outdoor air infiltration
- Cooling & heating load report
- <u>Sliver spaces</u>\*

 Narrow areas that are bounded by parallel interior
 room-bounding components (parallel interior walls).
 These spaces include, but are not limited to, pipe chases, HVAC shafts, furrowed columns, and wall cavities

(\*See also: Spaces <u>http://help.autodesk.com/view/RVT/2018/ENU/?guid=GUID-48509199-F248-4B61-9DC6-CEFBE2E302F2</u>)

## Conceptual energy analysis\*

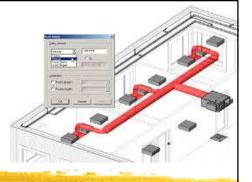

• Analyze a simplified project building in the concept design phase (for actual building components or a conceptual mass model)

• Experiment with different mass forms, orientations, envelopes, schedules, occupancy, and zoning to determine which building changes will have the greatest impact on energy performance

• Report can be exported to DOE-2 or EnergyPlus

(\*Video: Energy Analysis Using Conceptual Masses and Building Elements (2016) <u>http://help.autodesk.com/view/RVT/2018/ENU/?guid=GUID-2E939328-ECFC-6BF6-4EC1-457A31877D0F</u>)

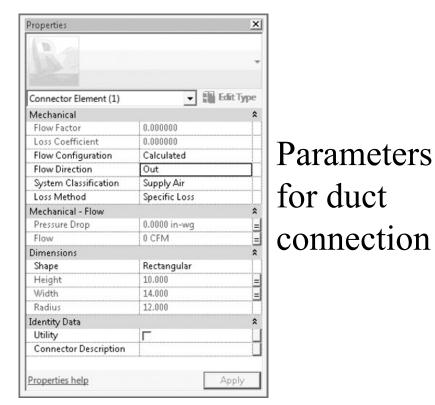

# **Creating logical systems**

## • Systems

- They represent the transfer of information between families. They range from supply air to refrigerants to laboratory gases to anything else a building needs to operate
- They are the logical connection between elements in the model
  - They are the link between the air terminal, the variable air volume (VAV) box, and the air handler, and they represent an additional layer of information above the physical connections made with duct and pipe

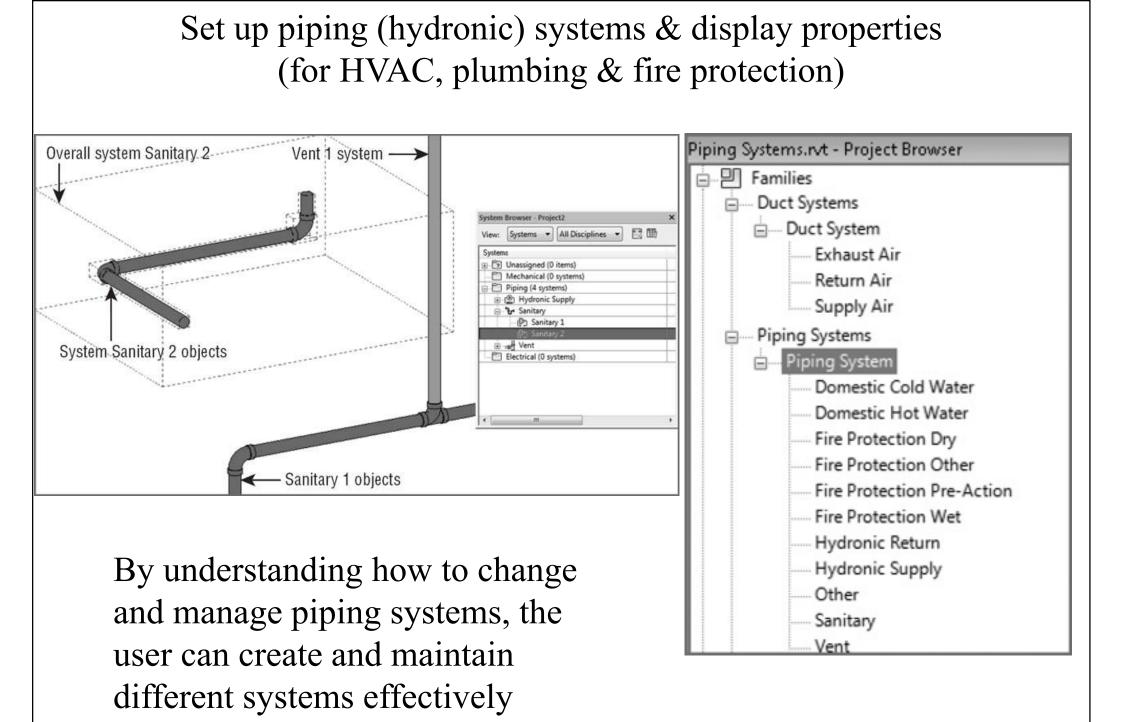

#### Selecting duct systems in the System Browser

## • Using System Filters

- Control over the visibility of certain elements in views & the appearance those elements will have
- Filters help us create high-quality documentation as well as providing a better way to examine our design and improve the coordination of our projects
- Mastering filter options enables you to create your models with the standards that your office has developed over years of producing CAD drawings

#### Using System Filters

Filters	Categories	Filter Rules		
Mechanical - Supply Mechanical - Return Mechanical - Exhaust Domestic Sanitary Hydronic Domestic Cold Water Domestic Hot Water	Select one or more categories to be included in the filter. Parameters common to these categories will be available for defining filter rules. # Mechanical systems & ductwork

## Ductwork\*

- Duct is presented as a single line at concept design or as a fully coordinated double line for a construction issue
- Three main types: rectangular, round, and oval
- Air distribution components
  - Diffusers in a ceiling, duct-mounted sidewall diffusers, wall mounted, suspended
  - Diffuser hosting methods in Revit

(\*See also: Mechanical Systems <u>http://help.autodesk.com/view/RVT/2018/ENU/?guid=GUID-39E76FDE-AD7F-43CE-914D-2CA2AB1C2680</u>)

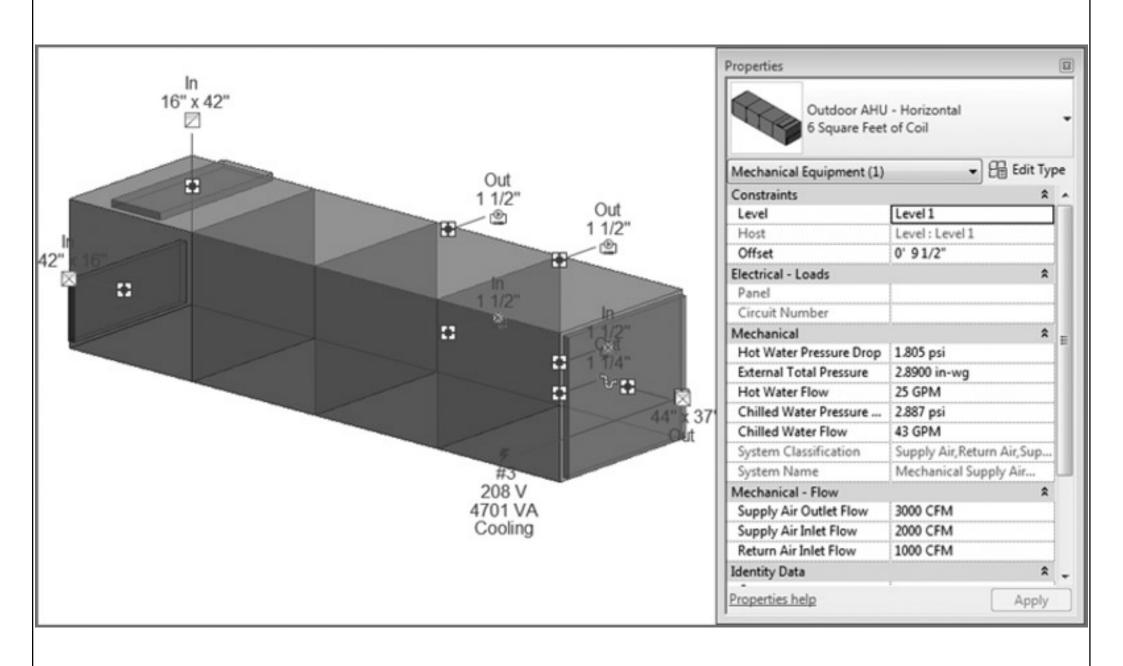

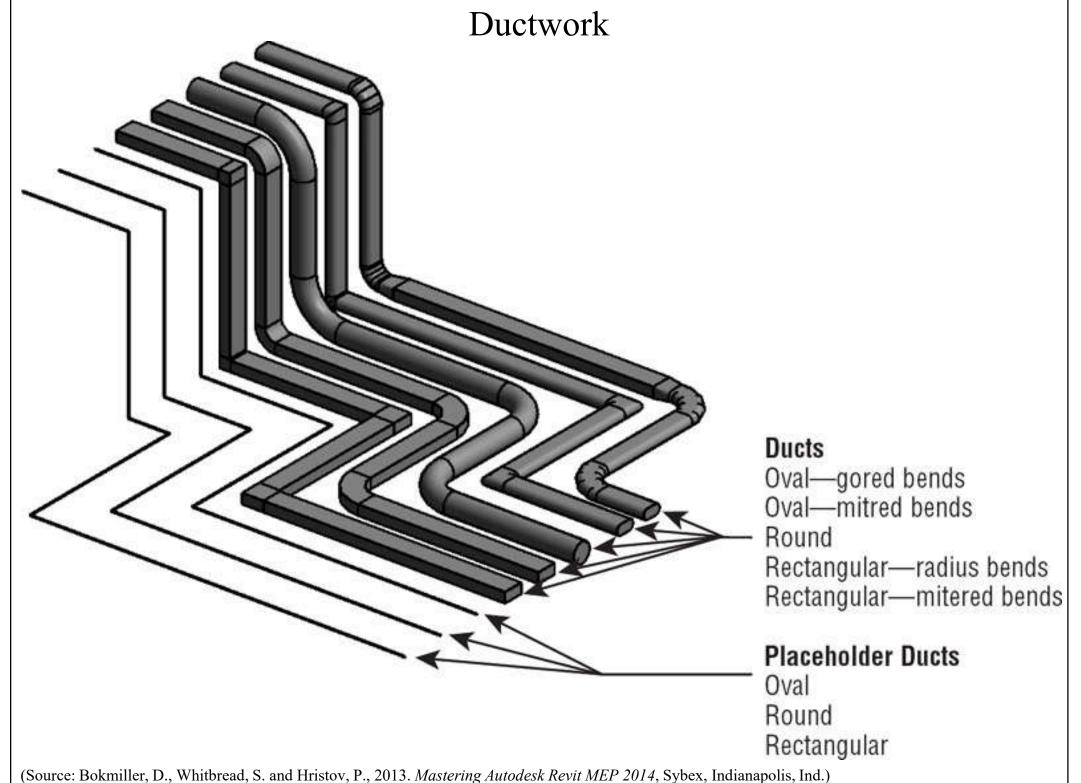

# Mechanical systems & ductwork

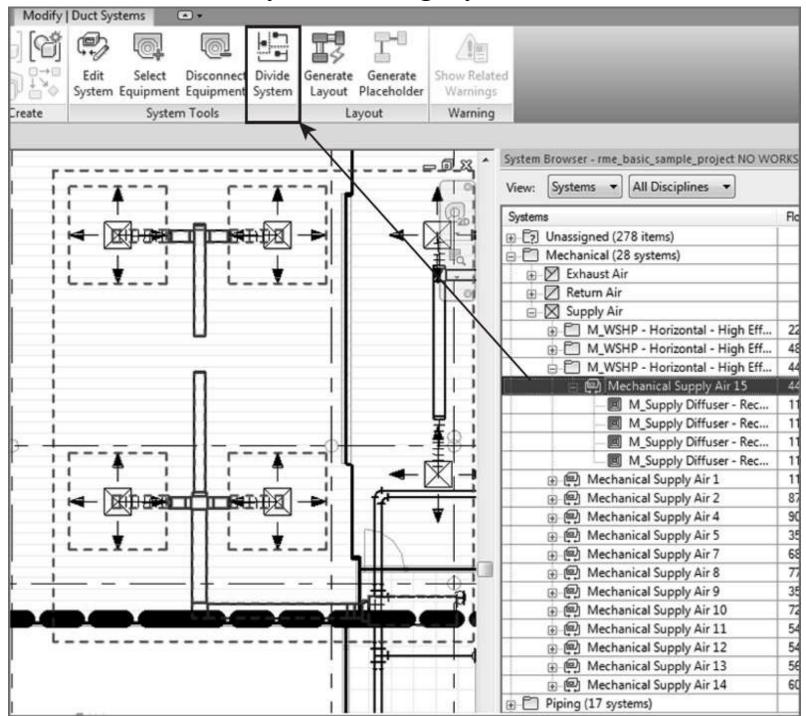

- Mechanical equipment components
  - Air conditioning/handling units
    - Floor mounted, skid mounted (w/ an offset or rail)
  - VAV boxes
    - Connection to water (chilled/hot) & electrical systems
  - Ductwork
    - Create using Duct Tool or Placeholder Duct Tool
    - Break up large systems to avoid slowing down the design process
    - Interference check for ducts and pipes

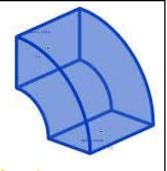

#### Basic AHU and type parameters

#### Divide system using System Browser

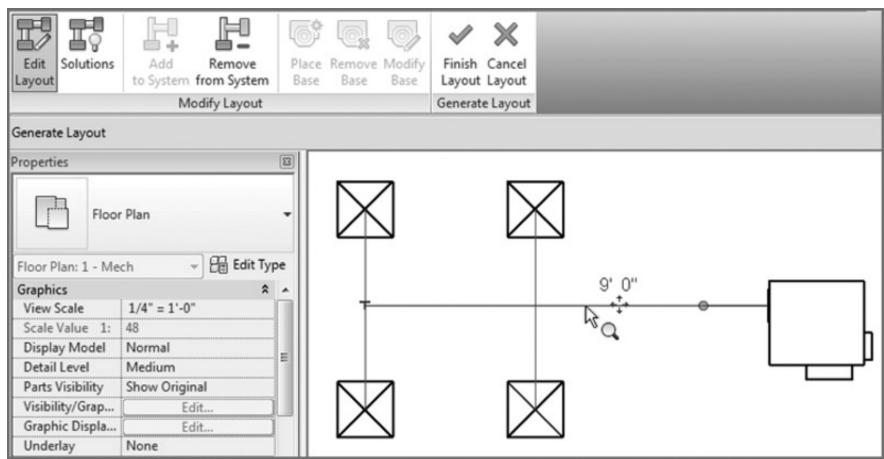

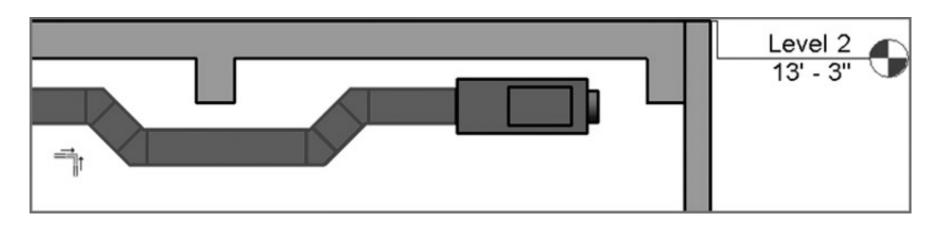

# Mechanical systems & ductwork

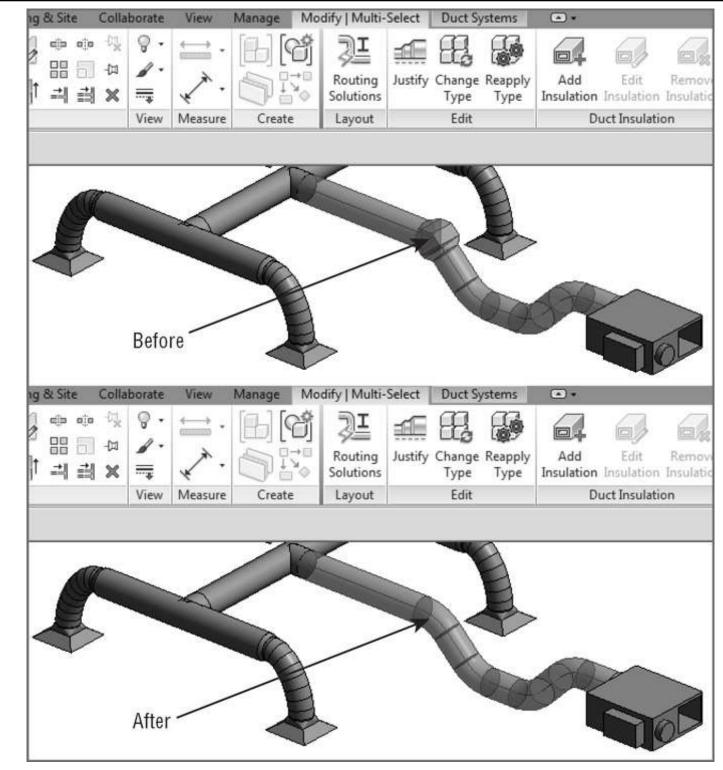

- Duct types & routing\*
  - Create duct types (Extract and Supply)
  - Schematic layouts
  - Automatic duct routing
  - Manual duct routing
  - Adjust fittings & extend the design

(\*See also: Duct http://help.autodesk.com/view/RVT/2018/ENU/?guid=GUID-CD01C176-8435-4C20-A87E-F7B975E9599C)

#### Automatic duct routing & manual editing

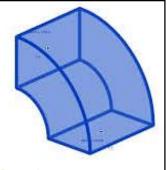

(Source: Bokmiller, D., Whitbread, S. and Hristov, P., 2013. Mastering Autodesk Revit MEP 2014, Sybex, Indianapolis, Ind.)

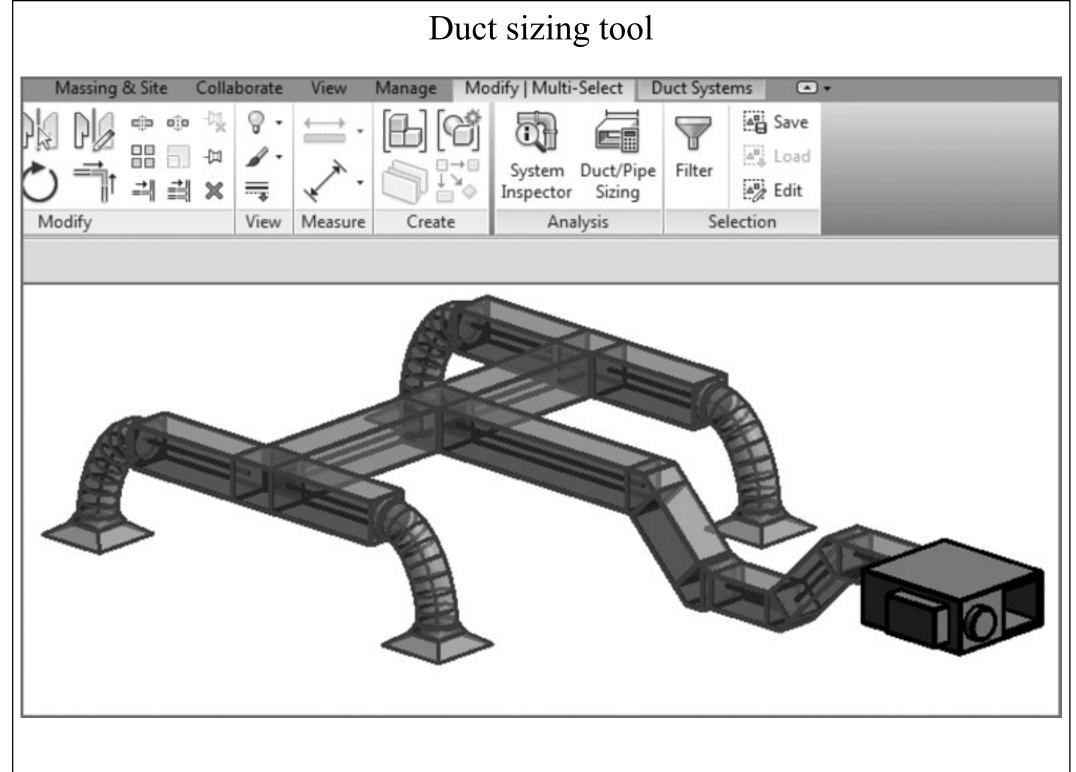

# Adjusting & modifying duct fittings

# Mechanical systems & ductwork

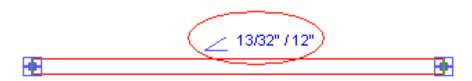

- Duct sizing\*
  - Choosing a duct sizing method (see HVAC notes)
    - Friction
    - Velocity
    - Equal friction
    - Static regain
  - Add duct insulation & lining
- <u>System Inspector tool</u>: to inspect the duct system for airflow, pressure, and pressure loss

(\*See also: Duct Sizing and Calculation Methods <a href="http://help.autodesk.com/view/RVT/2018/ENU/?guid=GUID-EFD12EAC-F54F-4C13-9E0A-7901CFE644C0">http://help.autodesk.com/view/RVT/2018/ENU/?guid=GUID-EFD12EAC-F54F-4C13-9E0A-7901CFE644C0</a>)

# **Mechanical piping**

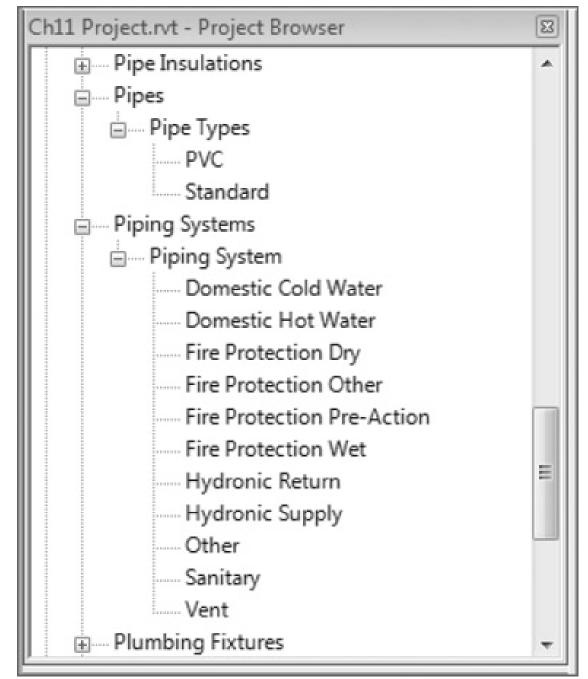

- Piping systems\*
  - Simple two-pipe or complex multi-pipe
  - Pipe settings:
    - Piping systems
    - Pipe types (materials & fittings)
    - Pipe segments & sizes (nominal sizes)
    - Fluid table (for sizing pipes, determine pressure drop)
    - Slope table
    - Fitting angles

6' 3"

(\*See also: Pipe http://help.autodesk.com/view/RVT/2018/ENU/?guid=GUID-EEB121ED-6C1F-4728-A615-B3AF36DD6A61)

### Creating piping systems

Domestic piping systems:

- Domestic cold water
- Domestic hot water
- Sanitary
- Vent

#### Fire-protection piping systems:

- Fire protection dry
- Fire protection wet
- Fire protection pre-action
- Fire protection other

#### Mechanical piping systems:

- Hydronic return
- Hydronic supply

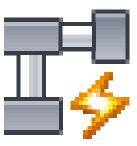

Other (e.g. medical gas)

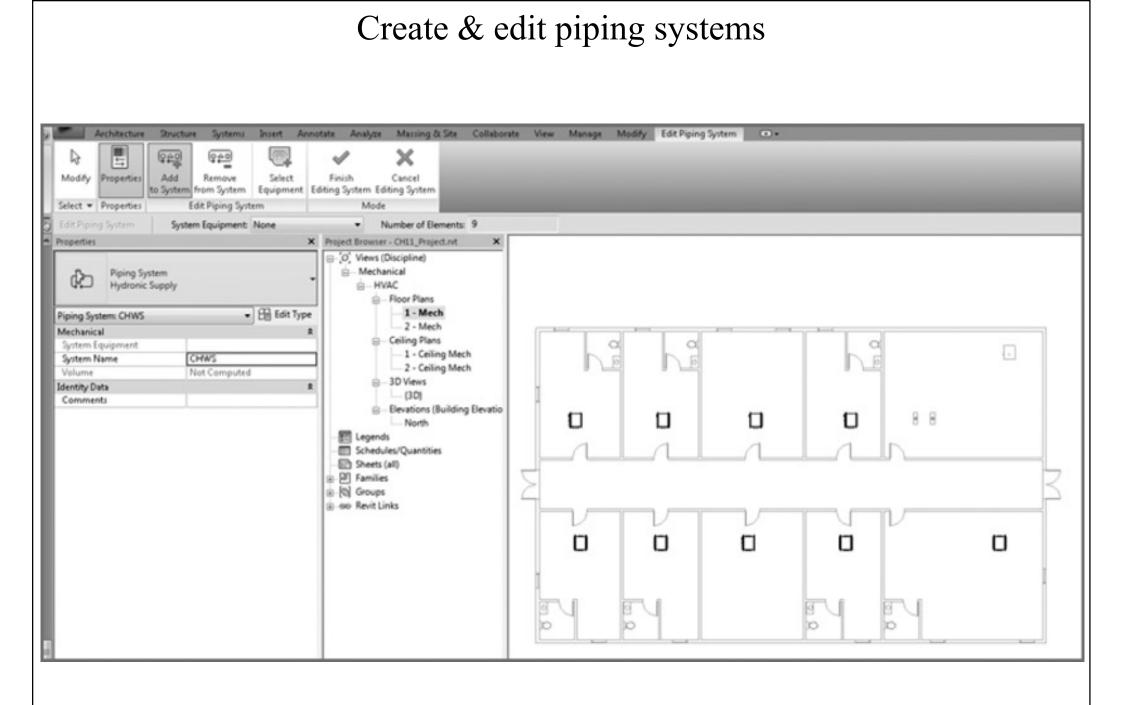

# **Mechanical piping**

- Pipe routing options:
  - Automatic pipe routing
  - Manual pipe routing
- Design tips:

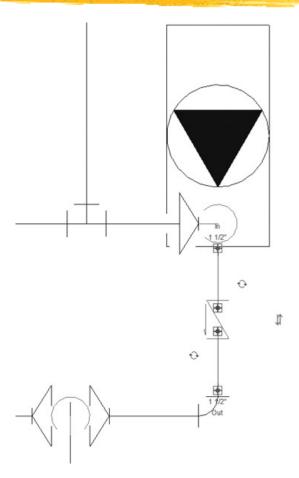

- Use project templates in piping layouts to improve productivity
- Automate with pipe connectors & improve coordination

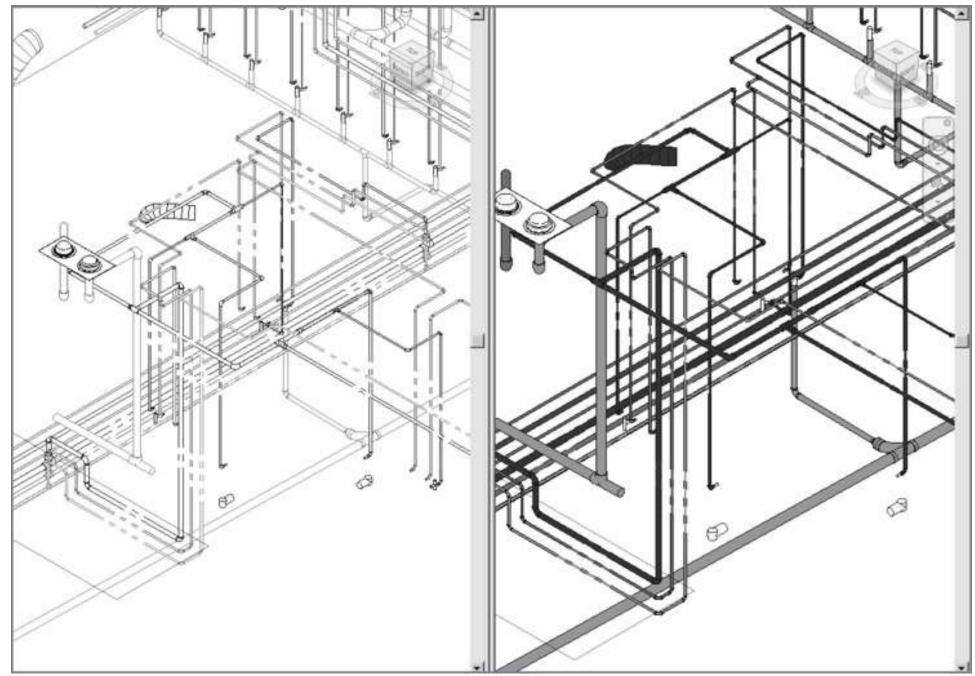

# **Mechanical piping**

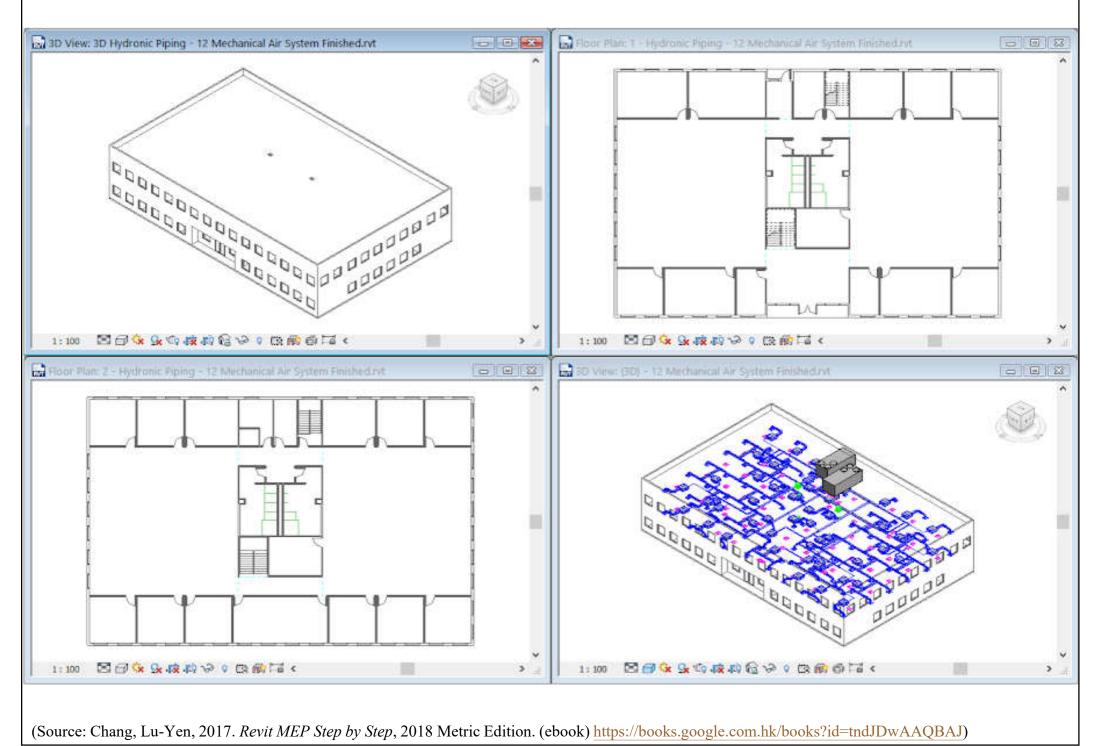

- Pipe fittings
  - End caps
  - Tee, tap, wye or cross
  - Transitions, couplings, or unions
  - Flange
- Placing valves
- Adding piping insulation
- Defining systems visibility through filters

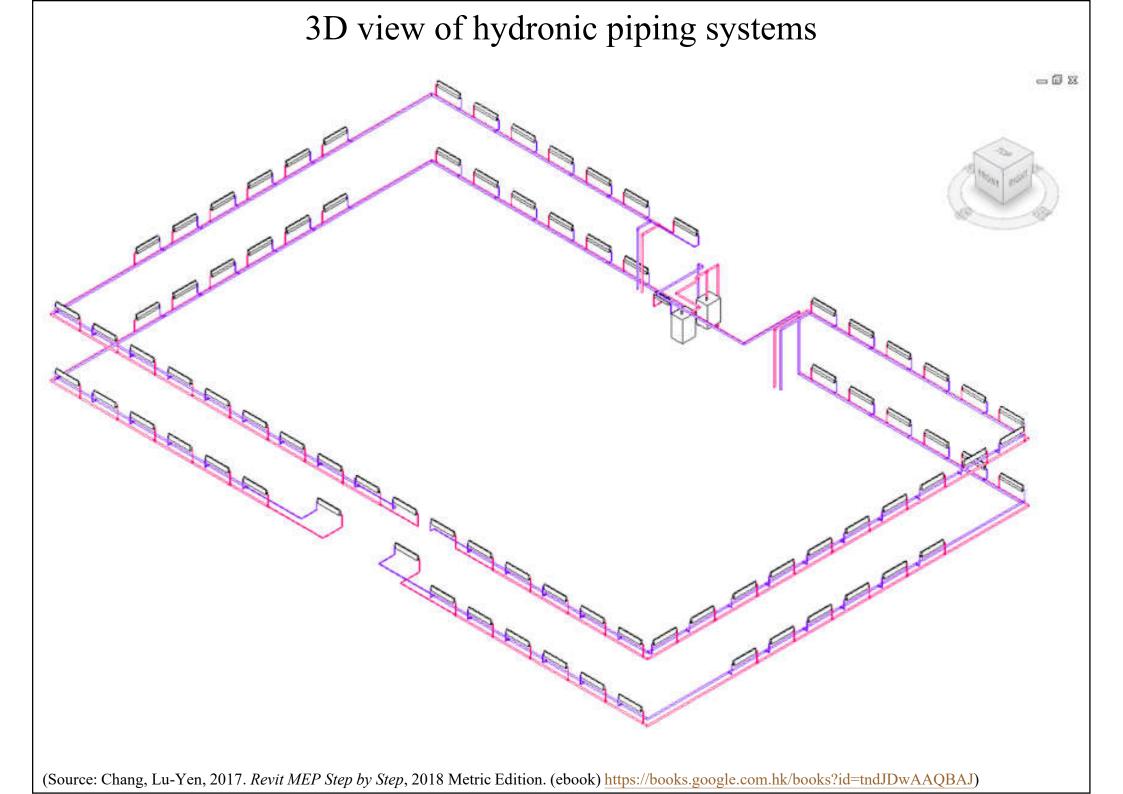

The same model displayed without filter overrides (on the left) and with overrides (to the right)

#### Different views of hydronic piping systems
