Contents

• ASHRAE Standard 90.1
• Structure and Scope
• Compliance Options
• Energy Cost Budget Method
• Performance Rating Method
• LEED Rating System
• ASHRAE Standard 189.1
ASHRAE Standard 90.1

- **ASHRAE** = American Society of Heating, Refrigerating and Air-Conditioning Engineers
  - Global leader in the arts and sciences of heating, ventilation, air conditioning and refrigeration
- [www.ashrae.org](http://www.ashrae.org)
- Important ASHRAE Standards:
  - 55: thermal comfort
  - 62.1: indoor air quality
  - **90.1: building energy conservation**
  - 135: BACnet (building automation & control)
  - 189.1: high performance green buildings
ASHRAE Standard 90.1

- ASHRAE Standard 90.1 (www.ashrae.org/standard901)
  - Energy Standard for Buildings Except Low-Rise Residential Buildings
    - Include (new) commercial & institutional buildings
  - SSPC 90.1 Standing Standard Project Committee

- Other relevant ASHRAE Standards:
  - 90.2 -- for low-rise residential buildings
  - 90.4 – for data centers (coming soon…)
  - 100 -- for existing buildings
ASHRAE Standard 90.1

Why ASHRAE Standards 90.1 is important?

- It is the reference standard for US Energy Policy Act and many building energy codes in USA
- It has been adopted in many countries as a model for energy efficiency guidelines and codes
- It is the professional “standard of care” set by ASHRAE consensus, with support from
  - IES (Illuminating Engineering Society) or IESNA
  - ANSI (American National Standards Institute)
- Required for LEED green building certification
ASHRAE Standard 90.1

- US Energy Policy Act requires State codes to meet or exceed 90.1 (different versions)
  - It becomes law when the States adopt it
- Other codes or standards also refer to it, e.g.
  - International Energy Conservation Code (IECC)
  - NFPA 5000
  - Federal codes
  - State or local specific codes (e.g. California Title24)
Building Energy Codes, e.g. ASHRAE 90.1, International Energy Conservation Code (IECC), California Title 24

(Source: Mr. Kent W. Peterson, former ASHRAE President)
ASHRAE Standard 90.1

• ASHRAE 90.1 timeline*:
  • 90-1975: first issued
  • 90A-1980: updated
  • 90.1-1989: updated
  • 90.1-1999: major rewrite
  • 90.1-2001: minor revisions
  • 90.1-2004: updates, reorganization
  • 90.1-2007: updates
  • 90.1-2010: updates
  • 90.1-2013: expanded & updates

(*See also: http://en.wikipedia.org/wiki/ASHRAE_90.1)
ASHRAE Standard 90.1

- Different versions of ASHRAE 90.1
  - 90-1975
    - Earliest version (in response to energy crisis)
  - 90A-1980 (w/ 90B-1975 and 90C-1977)
    - Modified & included lighting procedure from IESNA
  - 90.1-1989 and 1993 codified version of 1989
    - Significant change in envelope compliance
    - Towards a building energy performance standard
    - Upgrades in lighting and HVAC requirements
ASHRAE Standard 90.1

- Different versions of ASHRAE 90.1 (cont’d)
  - 90.1-1999/2001
    - Changes in format and technical content
    - Written in mandatory, enforceable language
    - Expanded climatic data to international locations
    - Both IP and SI units included
  - 90.1-2004
    - Envelope and mechanical requirements expressed using new climate zones
    - Lighting requirements more stringent by about 25%
    - Entire document has been reformatted
ASHRAE Standard 90.1

- Different versions of ASHRAE 90.1 (cont’d)
  - 90.1-2007
    - Incorporate 42 addenda
    - Further reduction in lighting power densities
    - Fan power limitation is based on either nameplate horsepower, or system brake-horsepower
    - Fan pressure drop adjustment & VAV fan control
  - 90.1-2010
    - Incorporate 60+ addenda, elevator was included
  - 90.1-2013 (current)
    - Expand to new areas; holistic building design
ASHRAE Standard 90.1

- ASHRAE 90.1-2013 (current version)
  - Goal: to achieve 30% energy savings compared to 90.1-2004 (may not be met for all building types in all locations)
- Standard 90.1 is on a 3-year cycle under a “continuous maintenance process”
  - Ongoing changes through “addenda”
  - Consensus standard (open ANSI process)
    - Jointly sponsored by IES and ANSI
ASHRAE Standard 90.1

- Related ASHRAE Standards
  - 90.2-2007: for low-rise residential buildings
  - 100-2006: energy conservation in existing buildings
  - 105-2007: standard methods of measuring, expressing and comparing building energy performance
  - 140-2011: evaluation of building energy analysis computer programs
  - 169-2013: weather data for building design standards
  - 55-2013: thermal comfort standard
  - 62.1-2013: ventilation for acceptable indoor air quality
  - 189.1-2011: high performance green buildings
ASHRAE 90.1 development process

Committee Proposes Standard Changes → Public Review and Comment → Comment Accepted → Committee Approval → ASHRAE Board of Directors Approval → ANSI Approval → New Standards or Addenda Published

Substantive Changes

Appeal of Committee Approval

upheld denied

(Source: US Department of Energy)
Code compliance and the building process in USA

- **Local Government** 
  - Local Code

- **State Government** 
  - State Code

- **Architects, Builders, and Engineers**
  - Review Plans
  - Review products, materials, equipment specifications
  - Review tests, certification reports, product listings
  - Inspect building and its systems during construction
  - Evaluate materials substituted in the field
  - Inspect prior to occupancy

- **Building Construction**

- **Compliance**

- **Save Energy and Money, Reduce Carbon Emissions**

(Source: US Department of Energy)
Structure and Scope

• Structure of Standard 90.1-2013
  • 1. Purpose
  • 2. Scope
  • 3. Definitions, Abbreviations, and Acronyms
  • 4. Administration and Enforcement
  • 5. Building Envelope
  • 6. Heating, Ventilating, and Air Conditioning
  • 7. Service Water Heating
Structure and Scope

• Structure of Standard 90.1-2013 (cont’d)
  • 8. Power
  • 9. Lighting
  • 10. Other Equipment
  • 11. Energy Cost Budget Method
  • 12. Normative References
Structure and Scope

- Standard 90.1-2013 Normative Appendices
  - A – Rated R-Value of Insulation and Assembly U-Factor, C-Factor, and F-Factor Determinations
  - B – Building Envelope Climate Criteria
  - C – Methodology for Building Envelope Trade-Off Option
  - D – Climatic Data
  - E – Informative References
  - F – Addenda Description Information
  - G – Performance Rating Method
Structure and Scope

• **Purpose**: provide *minimum* requirements for the energy-efficient design of buildings except low-rise residential buildings

• **Not a design or advanced building guide**
  - Separate advanced energy design guides were developed by ASHRAE and other related bodies

• **Consensus standard (open ANSI process)**
  - Jointly sponsored by IESNA and ANSI

* IESNA = Illuminating Engineering Society of North America (now IES)
  ANSI = American National Standards Institute
Structure and Scope

• Scope
  • New buildings and their systems
  • New portions of buildings and their systems (additions)
  • New systems and equipment in existing buildings (alterations), e.g. computer rooms

• Exemptions, such as
  • Equipment and portions of building systems that use energy primarily for industrial or manufacturing purposes
Structure and Scope

• Main areas of ASHRAE 90.1
  • 1. Building Envelope
    • Roofs, walls, floors, slabs, doors, vertical glazing, skylights
  • 2. HVAC Equipment and System
    • Cooling equipment efficiency, heating equipment efficiency, supply fans, ventilation control, ducts
  • 3. Lighting
    • Interiors electric lighting, controls, daylighting
  • 4. Services Water Heating (SWH)
    • Equipment efficiency, pipe insulation
  • 5. Power and Others
    • Motors, plug loads
ASHRAE 90.1 compliance approaches

Building System
- Envelope
- HVAC
- SWH
- Power
- Lighting
- Other

Compliance Options
- Mandatory Provisions (required for most compliance options)
- Prescriptive Option
- Trade Off Option
- Energy Cost Budget
- Simplified

Energy Code Compliance

(Source: US Department of Energy)
Exterior envelope and semi-exterior envelope

(Source: US Department of Energy)
Envelope compliance options in ASHRAE 90.1

- Mandatory Provisions
  - Prescriptive Option
  - Trade-off Option
  - Energy Cost Budget

- Compliance
Compliance Options

- **Building envelope prescriptive option:**
  - Window-to-wall ratio (WWR) \( \leq 40\% \), skylight-roof ratio \( \leq 5\% \)
  - 8 Criteria sets for different climate types
    - Insulation level, fenestration criteria

- **Building envelope trade-off option:**
  - Envelope performance factor (EPF) of proposed building \( \leq \) EPF of budget building
  - ENVSTD and ComCheck software
US climate zones for building envelope prescriptive option

(Source: US Department of Energy)
HVAC compliance paths

(proposed HVAC design) -> (mandatory provisions (§6.4)) -> (prescriptive requirements (§6.5)) -> (Energy Cost Budget Method (ECB, §11)) -> (Simplified Approach Option (§6.3)) -> (90.1-compliant HVAC system)
Compliance Options

- HVAC simplified approach option:
  - Limited to small buildings (< 2,500 sq.m)
- HVAC mandatory provisions:
  - Minimum equipment efficiency
  - Load calculations
  - Controls
  - HVAC system construction and insulation
  - Completion requirements
### Examples of HVAC equipment efficiencies

<table>
<thead>
<tr>
<th>Equipment type</th>
<th>Minimum efficiency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self-contained, water-cooled w/electric resistance heat (20–100 tons)</td>
<td>11.0 EER, 10.3 IPLV</td>
</tr>
<tr>
<td>Water-source heat pump (1.5–5.25 tons)</td>
<td>12.0 EER (cooling), 4.2 COP (heating)</td>
</tr>
<tr>
<td>Centrifugal chiller, water-cooled (≥ 300 tons)</td>
<td>6.10 COP, 0.576 kW/ton, 6.40 IPLV, 0.549 IPLV (at ARI rating conditions)</td>
</tr>
</tbody>
</table>

§6.4.1.1: “… Where multiple rating conditions or performance requirements are provided, the equipment shall satisfy all stated requirements …”
Mandatory HVAC provisions:
Zone thermostatic controls: perimeter zones

Core and each long exposure must be zoned separately

Building plan view: thermal zoning example

Treating these exposures as a single zone is okay

(Source: Trane)
Compliance Options

- HVAC prescriptive path:
  - Economizers
  - Simultaneous heating and cooling limitation
  - Air system design and control
  - Hydronic system design and control
  - Heat rejection equipment
  - Energy recovery
  - Exhaust hoods, radiant heating systems
  - Hot gas bypass limitation
Air-side economizer cycle control (outdoor air enthalpy)

Water-side economizer (free refrigeration)

(Source: 90.1 User’s Manual)
Lighting compliance requirements

Mandatory Requirements (Interior and Exterior)
- Controls
- Switching
- Efficiency

Interior Lighting Power Limits
- Total Connected Power
- Interior Lighting Power Allowance

Whole Building
OR
Space-by-Space

Exemptions

Additional Allowances

Exterior Lighting Power Limits
- Tradable
- Exemptions
- Non-Tradable

Total Connected Power
- Exterior Lighting Power Allowance

(Source: US Department of Energy)
Compliance Options

• Interior lighting power
  • Two methods to determine the interior lighting power allowance (ILPA):
    • 1) **Building area method**
      • For whole building, grossed lighted area is multiplied by allowance (more restrictive)
    • 2) **Space-by-space method**
      • For projects with well-defined space types
    • Exemptions, e.g. video production, medical
Compliance Options

• Interior lighting power (cont’d)
  • 1) **Building area method**
    • One lighting power density per major building function (e.g. office / parking garage / retail)
    • Average lighting power density (LPD) across entire building function modeled for both baseline and proposed case
    • No additional lighting power allowed
Compliance Options

- Interior lighting power (cont’d)
  - 2) **Space-by-space method**
    - One LPD per space function
    - Separate LPD modeled for each space or space function in both Baseline and Proposed cases
      - Total wattage allowance = sum of individual space allowances
      - Individual space allowance = space area x LPD allowance
    - Trade-offs are allowed
    - Additional lighting power are allowed
Compliance Options

- The ILPA is to be determined for:
  - The entire building OR
  - Separately metered or permitted portions of the building
    - Tradeoffs between portions are NOT allowed if they use different methods of calculation

- Exterior lighting power
  - Lamp efficacy
  - Exterior lighting power wattage limits
Compliance Options

• Service Water Heating
  • Prescriptive and energy cost budget
  • Mandatory provisions (Section 7.4)
    • Load calculations
    • Equipment efficiency
    • Service hot water piping insulation
    • System controls
    • Pools
    • Heat traps
  • Prescriptive path (Section 7.5)
    • Space heating and water heating
    • Service water heating equipment
Compliance Options

• Power and Other Equipment
  • Max voltage drop allowed at design load
    • Feeder conductors
    • Branch circuit conductors
  • Motor efficiency levels correspond to Energy Policy Act’s manufacturing standards
    • Mandatory provisions are for General Purpose Design A and Design B motors only
    • Motors in new buildings, additions to existing buildings, and alterations to existing buildings must comply
Energy Cost Budget Method

- **Energy Cost Budget (ECB) Method**
  - The ultimate trade-off method to trade-off across building systems through the use of annual, hourly simulation tools and a baseline building
  - The only real way to deal with unique designs, renewables, high-efficiency equipment, etc.
  - Buildings must still meet all mandatory requirements
  - Basis of *performance-based* codes
Basic concept of Energy Cost Budget (ECB) Method

- Proposed Building:
  - Meets basic requirements
  - Exempt from prescriptive and system performance requirements

- Reference Building:
  - Meets basic requirements

Simulate Annual Energy Cost

Design Energy Cost must be less than Energy Cost Budget

(Source: Hawaii building energy code)
Energy Cost Budget (ECB) Method in ASHRAE 90.1

Proposed Design → Building Energy Cost Budget Method

Proposed Design → Design Energy Consumption (DECON)

Design Energy Cost (DECOS) → Is DECOS <= ECB?

No → Modify proposed design

Yes → Energy Cost Budget (ECB)

Prototype Building

Reference Building

Compliance Ok
Energy Cost Budget Method

- **Step 1**: Verify compliance with the mandatory provisions of Standard 90.1
- **Step 2**: Determine which prescriptive requirements to implement
- **Step 3**: Model the proposed design in accordance with Section 11.3 of Standard 90.1
- **Step 4**: Model the budget design to determine the annual energy cost budget
- **Step 5**: Compare the annual energy costs of the two models
Energy Cost Budget Method

• Budget design (reference building)
  • Based on the proposed design, but changes all Standard 90.1-governed design details to represent minimum compliance, e.g.
    • Building envelope characteristics
    • Lighting power densities
    • Economizer type (if required)
    • Heat-recovery type (if required)
    • HVAC system type
    • Fan energy, cooling & heating equipment
Performance Rating Method

- **Performance Rating (PR) Method**
  - Appendix G of Standard 90.1
  - Instructions for using the ASHRAE Standard 90.1 Energy Cost Budget Method in conjunction with the LEED program
    - LEED = Leadership in Energy and Environmental Design (developed by US Green Building Council)
  - ECB forms the basis of the energy portion of the LEED rating
Performance Rating Method

- From 90.1-2010, Appendix G becomes a normative section (previously informative)
  - It incorporates Appendix G fully into the standard making it subject to the same rigorous public review process the rest of the standard undergoes
- Using 90.1 as baseline for energy efficient and green building programmes
  - Use performance rating method to calculate energy savings; give credits to advanced design strategies, more flexible than ECB method
Performance Rating Method

- Understand the intent and limitations
  - Intended for rating only; not for code compliance
  - Provide a baseline for comparison & rating
  - Not to accurately predict actual energy use/costs
- Factors affecting absolute accuracy:
  - Variations in occupancy
  - Variations in control and maintenance
  - Variations in weather
  - Changes in energy rates
  - Precision of the simulation software

</tr>
</tbody>
</table>
Performance Rating Method

- Trade-off limits
  - Does not allow energy savings based on promises about the future or measures made in the past
  - Savings must be based on “real time” conditions

- Documentation requirements
  - Project summary & project overview
  - Energy efficiency features
  - Mandatory features
  - Prescriptive tradeoffs
  - Energy results
Performance Rating Method

• The proposed building design should model:
  • All end-use loads
  • Any energy-saving strategies (e.g. daylighting and natural ventilation), where applicable
  • Actual lighting power if the lighting system already is designed, or the lighting power allowance in accordance with Section 9 of 90.1
  • Energy-saving architectural features, e.g. light shelves, overhangs, and other shading devices
  • Any undesigned systems as identical to the baseline building design

LEED Rating System

• **EAp2: Minimum energy performance**
  - **Intent:** Establish the minimum level of energy efficiency for the proposed building and systems
  - **Requirements:** Mandatory provisions of ASHRAE 90.1 and
    - Prescriptive requirements of 90.1 or
    - Performance requirements of 90.1 Section 11 (Energy Cost Budget Method) or
    - The requirements in the local energy code, whichever is more stringent
LEED Rating System

- **EAc1: Optimize energy performance**
  - **Intent**: Achieve increasing levels of energy performance above the baseline in the prerequisite standard to reduce environmental impacts associated with excessive energy use
  - **Requirements**: Awards points for improving performance rating of the design building vs. baseline building as per ASHRAE Standard 90.1 (Appendix G) [1 to 19 points]

LEED Rating System

- Standards referenced by LEED, such as
  - ASHRAE Standards
    - 90.1: Building energy conservation
    - 62.1: Indoor air quality
    - 55: Thermal comfort
    - 52: Testing of air-cleaning devices
  - ANSI Standards (e.g. E779-03 for air leakage rate)
  - IESNA (lighting credits for ASHRAE 90.1)
  - ASTM Standards
  - U.S. Code of Federal Regulations (CFR)

(*ASHRAE = American Society of Heating, Refrigerating & Air-conditioning Engineers, Inc.*)
ASHRAE Standard 189.1

• New **ASHRAE Standard 189.1**: Design of High-Performance Green Buildings
  • Developed by ASHRAE, USGBC and IESNA
  • A total building sustainability package
  • The first code-intended commercial green building standard in USA
  • It covers key topic areas similar to LEED
• Further information:
  • [www.ashrae.org/greenstandard](http://www.ashrae.org/greenstandard)
ASHRAE Standard 189.1

• What is Standard 189.1?
  • A standard developed in model code language
  • Provides minimum requirements for high-performance, green buildings
  • Applies to all buildings except low-rise residential buildings (same as ASHRAE Standard 90.1)
  • Optional compliance path to the International Green Construction Code (IgCC)
  • Not a design guide, not a rating system
Knowledge is power. Understanding is power².
ASHRAE Standard 189.1

- It is jointly developed by:
  - ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers)
  - USGBC (U.S. Green Building Council)
  - IESNA (Illuminating Engineering Society of North America)
- It is also approved by American National Standards Institute (ANSI)
Goals for Standard 189.1

- Establish mandatory criteria in all topic areas
  - One “challenge” is existing green building rating systems contain few mandatory provisions
- Provide simple prescriptive compliance options
- Provide flexible performance compliance options
- Complement green building rating programs
  - Standard is not intended to compete with green building rating programs (e.g. LEED)
Standard 189.1 building blocks
Compliance paths of Standard 189.1

- **Mandatory + Prescriptive Path**
  - (simple option, very few calculations)

- **Mandatory + Performance Path**
  - (more options, but more effort)

(Source: Mr. Kent W. Peterson)
ASHRAE Standard 189.1

- Standard 189.1 topic areas:
  - SS Sustainable Sites
  - WE Water Use Efficiency
  - EE Energy Efficiency
  - IEQ Indoor Environmental Quality
  - MR Building’s Impact on the Atmosphere, Materials & Resources
  - CO Construction and Operations Plans
ASHRAE Standard 189.1

- Sustainable Sites Highlights
  - Site selection
    - Allowable sites (e.g. brownfield)
    - Prohibited development activity
  - Reduce heat island effect
    - Site hardscape
    - Wall and roof
  - Reduce light pollution
    - Outdoor lighting
    - Light trespass limits
ASHRAE Standard 189.1

- Water Use Efficiency Highlights
  - Site water use
    - Bio-diverse plantings, hydrozoning, and smart irrigation controllers
  - Building water use
    - Plumbing fixtures & fittings, appliances, HVAC systems & equipment
    - Cooling tower maximum cycles of concentration
  - HVAC Systems, equipment
  - Water consumption management
ASHRAE Standard 189.1

• Energy Efficiency Highlights
  • More stringent than Standard 90.1-2007
    • Equipment efficiency compliance
  • Includes plug/process loads
  • Electric peak load reduction
  • Renewable energy provisions
    • On-site renewable energy systems
  • Energy measurement for verification
    • Remote or automatic reading meters
ASHRAE Standard 189.1

- Indoor Environmental Quality Highlights
  - Indoor air quality
    - Ventilation rates per ASHRAE Standard 62.1
    - Outdoor air flow rate monitoring of min. outside air
    - MERV 8 filter (MERV 13 in PM2.5 non-attainment areas)
    - No smoking inside building
    - Source contaminant control
  - Daylighting
  - Acoustical control
ASHRAE Standard 189.1

- The Building’s Impact on the Atmosphere
- Highlights
  - Construction waste management
  - Reduced impact materials
  - Wood products
  - Refrigerants (no CFC)
  - Storage and collection of recyclables and discarded goods
ASHRAE Standard 189.1

- Construction and Operation Highlights
  - Acceptance testing / commissioning
  - IAQ construction management plan
- Plans for Operation
  - High-performance building operation
  - Maintenance
  - Service life
  - Transportation management
