

CIBSE Hong Kong Branch  
Annual General Meeting: Seminar  
8 Mar 2011 (Tue)

# Green Roof Systems in Hong Kong

1911-2011

*Dr. Sam C M Hui and Ir Prof. K K Lam*

Department of Mechanical Engineering

The University of Hong Kong

# Contents

- Introduction
- Green roof systems
- Benefits of green roofs
- Hong Kong situation
- Worldwide experience
- Developing technical guidelines
- Conclusions

# Introduction

- Problems in urban cities
  - Urban heat island (UHI)
  - Lack of greenery space
- Green roofs can mitigate the adverse effects
  - Bring the nature back to urban area
  - Make better use of roof space
- Green roof market in Hong Kong
  - Still developing and immature
  - Lack of technical guidelines & policy

# Examples of green roofs in the world

Solar Campus Jülich, Germany (11 Jul 2001)

IBN-DLO Wageningen, the Netherlands (2 Jul 2001)

Putrajaya Int. Conven. Centre, Malaysia (30 Jun 2006)

Beitou Taipei Library, Taiwan (6 Aug 2007)

(Photos taken by Dr Sam C M Hui)

# Examples of green roofs in Singapore

Carpark roof of public housing (modular green roof)

Carpark roof of housing estate (built-in green roof)

Carpark roof of public housing (intensive green roof)

Lawn green roof (Nanyang Techn. Univ.)

(Photos taken by Dr Sam C M Hui, 29 May & 1 Jun 2009)

# Examples of green roofs in Hong Kong

Ocean Park Hong Kong

EMSD Headquarters

Parklane, Tsimshatsui

A school in San Po Kwong

(Photos taken by Dr Sam C M Hui)

# Green roof systems

- **Green Roofs:** roofs bearing vegetation – FLL
  - “Living vegetation installed on the roofs”
  - “Vegetated roof”
- **Green Roof System** – Definition
  - “A roof area of plantings/landscape installed above a waterproofed substrate at any building level that is separated from the ground beneath it by a man-made structure.” – *NRCA Green Roof System Manual 2007*
- Other terms: **Eco-roof, Living roof**

# Green roof systems

- Major types of green roofs (see Table 1)\*
  - Extensive
  - Semi-intensive
  - Intensive
- Roof gardens: usually intensive greening with other features such as potted plants, pond, etc.
  - Examples in HK: podium gardens, sky gardens
- Classify green roof systems by basic design:
  - Built-in green roofs vs Modular green roofs

\* Could also be combined as hybrid systems

Table 1. Major types of green roofs and their characteristics

Characteristics	Extensive	Semi-intensive	Intensive
Depth of material	150 mm or less	Above and below 150 mm	More than 150 mm
Accessibility	Often inaccessible	May be partially accessible	Usually accessible
Fully saturated weight	Low (70-170 kg/m <sup>2</sup> )	Varies (170-290 kg/m <sup>2</sup> )	High (290-970 kg/m <sup>2</sup> )
Plant diversity	Low	Greater	Greatest
Plant communities	Moss-sedum-herbs and grasses	Grass-herbs and shrubs	Lawn or perennials, shrubs and trees
Use	Ecological protection layer	Designed green roof	Park like garden
Cost	Low	Varies	Highest
Maintenance	Minimal	Varies	Highest

# Structure of extensive green roof

# Green roof systems from Germany (left) and Japan (right)

Table 2. Initial and maintenance costs of green roof systems

	<b>Intensive</b>	<b>Extensive</b>
Initial cost (HK\$/m <sup>2</sup> )	1,000 to 5,000 (average: 2,000)	400 to 1,000 (average: 500)
Maintenance cost (HK\$/m <sup>2</sup> /yr)	6.5 to 44 (average: 20)	0.8 to 2.25

(Source: (Urbis Limited, 2007))

# Benefits of green roofs

- Green roofs provide many benefits to the society (public) and building owners (private)
  - 1. Environmental benefits
  - 2. Economic benefits
  - 3. Amenity and aesthetic benefits
- Important considerations:
  - Some benefits are common to all green roofs, but many are project design specific; some benefits will be apparent if roof greening is on a large scale

Table 3. Public and private benefits of green roof systems

<b>Public benefits:</b>	<b>Private benefits:</b>
<ul style="list-style-type: none"><li>- Aesthetic value</li><li>- Mitigate urban heat island</li><li>- Stormwater retention</li><li>- Create natural habitat</li><li>- Functional open space</li><li>- Agricultural space</li><li>- Filter dust and pollutants</li><li>- Filter rainwater</li></ul>	<ul style="list-style-type: none"><li>- Increase roof life span</li><li>- Reduce cooling loads</li><li>- Contribute to green building rating credit points</li><li>- Better use of space</li><li>- Reduce noise levels</li><li>- Reduce risk of glare for surrounding buildings</li></ul>

# Benefits of green roofs

- 1. Environmental benefits:
  - Biodiversity and wildlife value
  - Stormwater management
  - Rainwater runoff quality
  - Air pollution mitigation
  - Carbon sinks (sequestration)
  - Mitigation of urban heat island
  - Control of noise pollution

# Green roof hydrograph comparison

Green Roof Hydrograph Comparison 12-2-05

(Source: Stormwater Academy, University of Central Florida)

# Benefits of green roofs

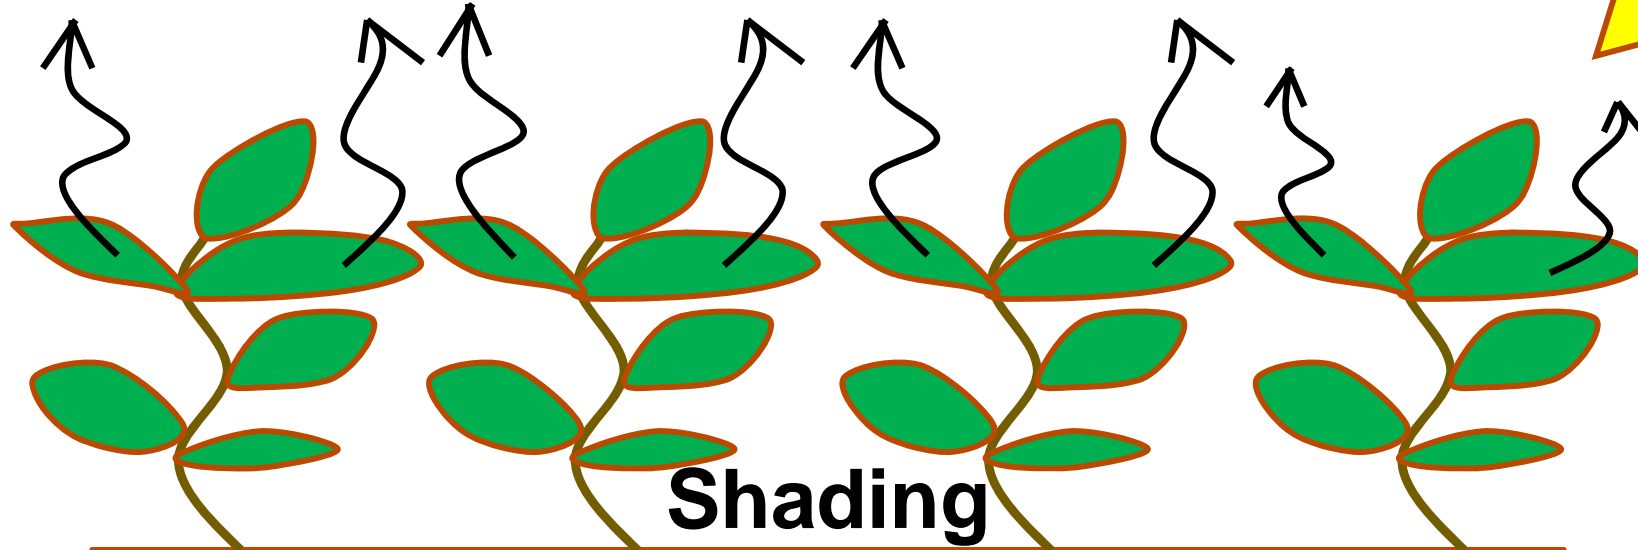

- 2. Economic benefits:
  - Extends roof life
  - Reduces air conditioning & heating costs (energy and maintenance)
  - Reduces capital costs for equipment and installation (air conditioner, drainage and pipes)
  - Reduces water and sewerage charges
  - Attracts buyers and tenants
  - Attracts and retains employees

# Thermal properties of green roofs

Outdoor

**Evapo-transpiration**

**Shading**

**Thermal mass**

**Insulating property**

**Roof slab**

Indoor

# Benefits of green roofs

## • 3. Amenity and aesthetic benefits:

### • Aesthetically pleasing, useful space

- If roof loading is sufficient, green roofs can be planned for amenity and recreational use

### • Food production (e.g. community gardens)

- Opportunity for growing healthy food in urban areas
- A range of marketable products (vegetable, fruit)

### • Local job creation (direct and indirect)

- On green roof maintenance, urban agriculture, etc.
- Useful for low-income group

Urban farming & education

Horticultural therapy &  
social functions

# Rooftop urban farming in the world

Bangkok, Thailand (with rice and fruits)

Tokyo, Japan (rooftop greenhouse)

London, UK (with bee keeping)

San Francisco, USA (for kitchen/restaurant)

(Source: [www.time.com](http://www.time.com))

# Container garden in Taiwan

(Source: <http://yiu.com.tw/green.htm>)

# Sustainable rooftop farming 可持續的天台農耕

# A green roof project with integrated systems

# Hong Kong situation

- Some intensive green roofs can be found on:
  - Landscape podium roof gardens
  - “Sky gardens”
  - Public open spaces built on government structure
- Extensive green roofs and other urban greening technologies is still limited
  - No government policy and requirement
  - Little incentives for private to invest on it

# A landscape podium garden in North Point, Hong Kong

(Photos taken by Dr Sam C M Hui)

# A landscape podium garden in Tseung Kwan O

# Hong Kong situation

- Greening policy set up in recent years ([www.devb.gov.hk/greening](http://www.devb.gov.hk/greening))
  - Aims to improve urban greenery and maximise greening opportunity
  - Greenery and landscaping in the planning of new towns and new development areas
- Space constraints limit greening in urban areas
  - Green roofs is a promising choice
    - However, a clear policy for green roofs is not available

# Potential of promoting green roofs in urban areas

Kwun Tong

(Source: <http://hk.centamap.com>)

# Hong Kong situation

- Government pilot projects, e.g. by:
  - Architectural Services Department (ArchSD)
  - Drainage Services Department (DSD)
  - Housing Authority (HA)
- But, the technical requirements and actual performance of the green roofs are not well defined and understood
  - This will hinder development of the local green roof or greenery market and technology

# Hong Kong Wetland Park Phases II (the largest green roof in Hong Kong)

(Source: Architectural Services Department)

# Green roof on a water treatment plant in Hong Kong

(Source: Drainage Services Department)

# Hong Kong situation

- Green roof research
  - In 2006-07, the Government commissioned a consultancy study on “Green Roof Application in Hong Kong” (Urbis Limited, 2007)
  - In the past few years some research projects on green roof are developed; but most of them focuses on field experiments and measurements
  - A lack of research on practical design issues and technical codes (c.f. FLL in Germany & CUGE in Singapore)

# Worldwide experience

- Germany and Japan are more advanced
- Germany: **FLL guidelines** (FLL, 2008)
  - By Research Society for Landscape Development and Landscape Design (Forschungsgesellschaft Landschaftsentwicklung Land-schaftsbau e.V.) ([www.fll.de](http://www.fll.de))
  - Set quality standards for green roof systems
  - Complement the construction regulations in Germany and the DIN standards of landscape contractors

# Worldwide experience

- Japan guidelines on rooftop & wall greening
  - Started in 1990 by the Organization for Landscape and Urban Green Technology Development ([www.greentech.or.jp](http://www.greentech.or.jp))
    - Organise annual competition on greening technology since 2002
    - Coordinate R&D work, conferences and incentive schemes on urban greening
  - Local provincial governments also developed their requirements and standards

# Worldwide experience

- Other places which have developed guidelines and codes for roof greening:
  - UK: GRO Green Roof Code 2011
  - Canada
  - Australia
  - China (Beijing, Guangzhou, Shenzhen)
  - Singapore
  - UAE
  - USA

# Worldwide experience

- Some countries have also developed technical standards, e.g.
  - ASTM standards
  - SPRI standards (on wind and external fire)
  - Singapore standards (on design loads and safety)
  - Toronto Green Roof Construction Standard 2010

# Developing techn. guidelines

- A research project sponsored by CIBSE Hong Kong Branch
  - Prepare technical guidelines for green roof systems in Hong Kong
  - Learn from experience of other countries/cities
  - Will also consider and adapt the local conditions of Hong Kong
- Project duration:
  - September 2010 to March 2011 (~ 6 months)

Table 4. Proposed contents of the guidelines

<b>Part 1</b>	<ol style="list-style-type: none"><li>1. Introduction</li><li>2. Scope</li><li>3. Definitions</li></ol>
<b>Part 2</b>	<ol style="list-style-type: none"><li>4. Planning Requirements</li><li>5. Design Considerations</li><li>6. Construction</li><li>7. Maintenance</li><li>8. Project Management</li></ol>
<b>Part 3</b>	<p>References</p> <p>Appendices (with case studies)</p>

Table 5. Major factors to consider

<p>Planning Requirements</p>	<ul style="list-style-type: none"> <li>- Functions and effects</li> <li>- Structural loading</li> <li>- Accessibility</li> <li>- Site conditions (wind, shade)</li> <li>- Water proofing condition</li> <li>- Green building credits</li> </ul>
<p>Design Considerations</p>	<ul style="list-style-type: none"> <li>- Landscape design</li> <li>- Irrigation &amp; water supply</li> <li>- Stormwater drainage</li> <li>- Plant species</li> <li>- Wind design (e.g. typhoons)</li> <li>- Sustainable technologies (e.g. solar)</li> <li>- Food production (farming)</li> <li>- Rainwater recycling</li> <li>- Roof slope</li> </ul>
<p>Construction</p>	<ul style="list-style-type: none"> <li>- Safety issues (preventing falls)</li> <li>- Vegetation planting method</li> <li>- Testing &amp; monitoring</li> </ul>
<p>Maintenance</p>	<ul style="list-style-type: none"> <li>- Maintenance requirements</li> <li>- Warranties</li> <li>- External fire hazard</li> <li>- Safety issues</li> </ul>
<p>Project Management</p>	<ul style="list-style-type: none"> <li>- Green building assessment</li> <li>- Financial incentives</li> <li>- Regulatory measures</li> <li>- Contractual matters</li> </ul>

# Developing techn. guidelines

- Considerations for Hong Kong:
  - High-density urban areas
    - Very limited roof area
    - More effective to apply green roofs to podiums and medium- or low-rise buildings/structures
  - Green roof on existing buildings
    - Limited by loading capacity
    - Guidance to help people select a suitable green roof system (usually light-weight)
  - Typhoon and stormwater

# Developing techn. guidelines

- Green Building Assessment Methods

- Such as LEED 2009 and BEAM Plus
- They are becoming more and more popular and important
- In fact, greening technology has significant implications to the assessment results
- Our guidelines will include information to help people optimise the credit points from green roofs

Table 6. LEED 2009 credit points of green roof systems

LEED criteria impacts:	Points
<i>Sustainable Sites (SS)</i>	
Credit 6.1: Stormwater design – quantity control	1
Credit 6.2: Stormwater design – quality control	1
Credit 7.2: Heat island effect – roof	1
<i>Water Efficiency (WE)</i>	
Credit 1: Water efficient landscaping	2-4
<i>Energy and Atmosphere (EA)</i>	
Credit 1: Optimize energy performance	1
<i>Materials and Resources (MR)</i>	
Credit 4: Recycled content (roof components)	1-2
Credit 5: Local/Regional materials	1-2
<i>Secondary credit impacts:</i>	
<i>Water Efficiency (WE)</i>	
Credit 2: Innovative waste water technologies	2
Credit 3: Water use reduction	2-4
<i>Innovation in Design (IN)</i>	
Credit 1: Innovation in design	1-5

Source: extracted from USGBC (2009)

Table 7. BEAM Plus credit points of green roof systems

BEAM Plus criteria impacts:	Points
<i>Sites Aspects (SA)</i>	
Perequisite: Minimum landscape area	Req'd
SA 5: Ecological impact	1
SA 7: Landscaping and planters	1-3
SA 8: Microclimate around buildings (roof)	1
<i>Materials Aspects (MA)</i>	
MA 7: Recycled materials (roof components)	1
Credit 5: Local/Regional materials	1-2
<i>Energy Use (EU)</i>	
EU 1: Reduction of CO <sub>2</sub> emission	1-15
EU 2: Peak electricity demand reduction	1-3
<i>Water Use (WU)</i>	
WU 1: Water efficient irrigation	1
WU 6: Effluent discharge to foul sewers	1
<i>Secondary credit impacts:</i>	
<i>Water Use (WU)</i>	
WU 4: Water recycling (rainwater)	1-2
<i>Innovations and Additions (IA)</i>	
IA 1: Innovative techniques	1-5

Source: extracted from BEAM Society (2009)

# Developing techn. guidelines

- Green roof performance and quality
  - Avoid poorly designed/constructed green roofs
  - Consider the true value of green roof systems and their impacts
- Types of performance
  - Thermal and energy performance
  - Hydrologic or stormwater management performance
  - Air quality/ pollution control
- Ecological function is also important

# Green roof inspection report – Checklist

## Testing:

Flood test	Electrical field vector mapping
Impedance test	Infrared (IR) thermal imaging
Low voltage test	Moisture sensors

## Inspection:

A. Green roof size and location	H. Waterproofing
B. Gravity loads	I. Drainage
C. Slope stability	J. Water retention
D. Parapet height and/or overflow scupper	K. Vegetation performance
E. Wind uplift	L. Plant selection
F. Fire safety	M. Irrigation
G. Occupancy and safety	N. Maintenance plan

# Developing techn. guidelines

- In Germany, FLL has developed a performance rating system for green roofs based on the desired ecological functions:
  - Water retention capacity of the growing medium
  - Water retention capacity of the drainage layer
  - Number of plant species for extensive green roofs
  - Plant biomass or volume for intensive green roofs
- It also help to judge whether a project is suitable for ecological compensation

Table 8. FLL's qual. parameters for assessing green roof performance

Category:	Description:
Soil	Quality of soil
Water	Improvement in surface water quality Reduction in load of the sewer system Improvement in groundwater recharge Purification of stormwater
Air & temperatu re	Filtering of air Contribution to oxygen production Contribution to urban temperature levelling
Habitat	Contribution to establishment of flora and fauna habitat
Landscape	Contribution to landscape and urban scenery
Amenity	Contribution to amenity for people / leisure / healing

Note: \* Each parameter is deemed “possible to fulfill completely”, “possible to fulfill partially”, or “slightly or not possible to fulfill.”

# Developing techn. guidelines

- Example: “Karlsruhe Performance Rating System” for green roofs, according to five natural functions:
  - Type and depth of soil used (Soil) – 15%
  - Impact on climate due to evapotranspiration (Climate) – 15%
  - Type and variety of vegetation (Flora) – 30%
  - Impact on zoological biodiversity (Fauna) – 30%
  - Average annual stormwater retention (Water Balance) – 10%

# Conclusions

- Urban cities like Hong Kong can benefit from green roofs and walls
- There is a need to develop local technical guidelines for planning, designing and commissioning green roof systems in HK
- To achieve a sustainable urban environment
  - Financial incentives & public awareness
  - Promote roof and multi-level greening
- **Green roof movement** in HK has just begun!

# THANK YOU 謝謝 !!
